THE REPUBLIC OF THE SUDAN

REPORT

OF THE

MEDICAL SERVICES, MINISTRY OF HEALTH

FOR THE YEAR

1963/1964

Digitized by the Internet Archive in 2019 with funding from Wellcome Library

CHAPTER I

INTRODUCTION

On the whole rainfall was lower than last year, with Equatoria recording the highest. No shortage of grain occurred.

Epidemic Diseases

The year was free from Small-Pox and, as concerns Cerebrospinal Meningitis, only sporadic cases were reported from all the Provinces, with Blue Nile recording the highest incidence. The number of cases for the whole country totalled 927 as against 1559 for last year.

Endemic Diseases

A total of 802,625 cases of Malaria was recorded during the year as against 784,010 in the previous one (please also see W.H.O. Assisted—Malaria Project Report).

The control of Bilharziasis with chemical and mechanical barriers in the Gezira Irrigated Area continues as usual.

The incidence of Trypanosomiasis continued to scale down with the regular strict routine inspections and therapeutic prophylaxis of Lomidine. Only 27 cases were recorded as against 41 last year.

Curative Field

On this side, two hospitals, 24 dispensaries and 18 dressing stations were opened during the year.

INTERNATIONALLY ASSISTED PROJECTS

Tuberculosis

Routine tuberculin testing and protection with B.C.G. Vaccination continued in the permanent Provincial Centres. The totals for testing and vaccinations carried out in these centres amounted to 273,904 and 154,891 respectively. Mass-scale operations continued in Blue Nile (North area) and Wadi Halfa.

In Wad Medani Tuberculosis Control, Demonstration and Training Centre, in accordance with the standard method established. 13,270 attendants were seen (5238 new and 8032 old cases). 5933 persons were covered with tuberculin test and 1805 with B.C.G. Vaccination, while 6317 home visits were achieved.

Malaria Project

The Project continued to progress according to plan and the year has recorded tremendous activities in this field. The Pre-eradication Programme has officially commenced in June, 1963, laying its main emphasis during 1963/64 on the assessment and evaluation of the existing general health services and in this respect guidelines of the procedure adopted for the countrywide surveys, were developed from a preliminary assessment conducted in Sennar Rural Council Area. The objective of the assessment surveys, apart from being geared to give optimum health facilities to the population, is to provide maximum support for the future Malaria Eradication Programme. So far assessment was completed in the Northern Province and Southern Area of Kassala and is in course in the Red Sea Area.

In Sennar after the Malaria Eradication Training Centre has been established with all the necessary facilities, a re-orientation and refresher courses started in September/October, 1963 for National Personnel of Malaria Pre-Eradication Programme, Malaria Eradication Training Centre and Malaria Eradication Demonstration and Training Operations, Khashm El Girba.

In Khashm El Girba, in October, 1963, the Resettlement Area with buffer zone along the Atbara River from Shówak in the South to Goz Ragab in the North was selected for malaria eradication demonstration and training operations, following a request from the Ministry. The plan of action envisaged simitlanousely attack with D.D.T. spraying and active and passive case finding.

All resettlers were given malaria drug prophylaxis which was followed up in their Settlement Area new homes where they were immediately covered by case detection system.

General spraying operations were carried out in November/December, 1963 and May/June, 1964 using D.D.T. 75 per cent W.D.P.

Rural Health Demonstration Project-El Huda

Through funds provided by the Gezira Board it was possible to construct, adopting designs participated to, by experts of W.H.O., UNISCO and University of Khartoum, three experimental latrines and four houses.

All school children at El Huda and Tabat were medically examined and systematic visits by Medical Assistants to the villages in the neighbourhood started

Small-Pox Eradication Campaign

The Internationally-assisted Nation-wideVaccin ation Campaign against Small-Pox which was launched the previous year, continued and 3,220,954 persons were covered in the Blue Nile (Northern Division), Khartoum, Northern and Kassala Provinces.

High Nursing College—Khartoum

There were 40 girls under training in the 3 classes during the year.

11 girls graduated this year including two Libyans on W.H.O. fellowship.

Onchocerciasis Control Project

During the year treatment of sufferers in the Pilot Project Area around Wau town which started in 1961, continued. Entomological surveys under the supervision of W.H.O. Entomologist who arrived in March, 1963, were established all over country and during the 2nd half of 1963 a national counter-part was appointed for the W.H.O. Entomologist as well as a Public Health Officer to shoulder the administration side of the entomological section. Surveys commenced in the Blue Nile (North Area) and Kassala in August/December, 1963 and in February, 1964 in the Northern Province, to continue for a complete cycle of one year before control measures can be organized. The future policy is to adopt both methods i.e. treatment of sufferers and destruction of vector.

Communicable Eye-Diseases Project

Established early in 1963 after the arrival of W.H.O. Ophthalmologist in December, 1962, this Project will proceed as a Pilot programme in Atbara-Berber Area for two years and then expand gradually to cover the whole province.

During the year 12,000 of the rural and urban population have received treatment.

Halfa Resettlement Ophthalmological Unit

This unit continued its work during the year 1963/64 on similar lines to those of the trachoma and Communicable Eye-Diseases Project of Atbara Area. It started work in February 1962 and the majority of the women and children popultaion of the area received treatment. The work was much curtailed when the actual movement of the population to the Resettlement Area took place ad it is therefore proposed to reorganize the treatment scheme again in the new Area.

U.N.I.C.E.F.

This Organization is extending appreciable help to mother and child welfare centres, midwifery, nursing schools (junior), Tuberculosis, Malaria Project and school of Hygiene through provision of milk, vitamines, mineral tablets and transport.

Fellowships

The following candidates were awarded Study Courses during the year:-

| Name | Nature of Study | Country |
|---|---|---|
| Dr. M. A. El Gaddal Dr. M. Kamal Mohd. Medani Miss Hikmat Talib Ismail Sayed Abdel Ghani Omer Sayed Abdel Mutalib Mohed. Sayed Mahmoud Gubara Dr. Shakir Musa | Malaria Eradication (Study Tour) D.P.H. Radiotherapy Statistics Statistics Training Course on the Epidemiology and Bacteriology of Enteric Infection | Ethiopia, Pakistan and Iran U.K. U.K. Lebanon Lebanon Lebanon |
| Sayed Omer Taha El Gabbani Sayed Mustafa Hassan Ahmed Sayed Mohd. Mustafa Humeda Sayed Abdalla Taour Obeid Dr. Tahir Abdel Rahim Sayed Zuhair A. Atabani | Drug Control Community Development Psychiatric Nursing Psychiatry (DPM) Inter-Regional Training Course for | U.A.R. U.A.R. Lebanon Lebanon U.K. |
| Dr. M. El Mardi El Mamoun Dr. Abdin M. Sharaf | Industrial Hygienists | Yugoslavia London and Ibadan Praque and |
| Miss Kaltoum Agab Ali Dr. Abdel Hamid El Sayed | Midwifery and Health Visiting International Advanced Course in M.C.H. | Copenhagen U.K. |
| Sayed Kh. B. El Bedri | Malaria Eradication (Study Tour) | Lebanon- Syria, Pakis- tan, India and Manila |
| Dr. Osman Abdu Mohed. Miss Berlanti Zaki Miss Khadiga Idris Miss Aziza Ramadan Dr. Abdel Ghani Farah | Diploma Psychiatry Sister-Tutors Diploma Heart & Chest Diseases (Nursing) Theatre Supervisors Course Diploma Anaethesia | U.K. |

18 delegates from the Ministry of Health have attended the following Conferences or Seminars:—

| Name | Conference or Seminar | Date |
|---|--|---|
| Dr. T. A. Baasher Dr. M. F. Shaddad Dr. M. R. Farid | Annual Meeting of the World Federation for Mental Health, Amesterdam Symposium on Medical Education, Karachi | 22-26 July, 1963 5-17 Aug., 1963 20-26 Aug., 1963 |
| Sayed Yousif Fadl) Dr. Ali Daw El Beit Sayed Omer Ibrahim Medani | Inter-Regional Travelling Seminar on the Organization of Epidemiological Services, U.S.S.R | 7-23 Oct., 1963 14-30 Oct., 1963 |
| Dr. El Sheikh A; Rahman Sayed Ahmed Ibrahim Idris Dr. Ali M. Nur Dr. Osman Ibrahim Dr. Anis M. A. El Shami Dr. M. H. Statti | Medical Radiation Seminar on Vital and Health Statistics Damascus W.H.O. Franck Constitutes Weller | 21-25 Oct., 1963 October, 1963 |
| Dr. M. H. Satti Dr. Mohed. Ibrahim El Imam Dr. M. R. Farid | W.H.O. Expert Committee on Yellow Fever, Geneve | 29-31 Oct., 1963 6-16 Nov., 1963 |
| Dr. M. R. Farid | Control of Enteric Diseases, Geneve Meeting of National Fellowships Officers, Alexandria | 12-18 Nov., 1964 26-28 Nov., 1963 |
| Dr. Ali Nur | fare in Relation to Urbanization, U.A.R | 30 Nov.—9 Dec. 1963 March, 1964 |

Some 45 vititors from W.H.O. and various other countries visited the Sudan either in connection with the abovementioned projects or on fellowships study tours.

CHAPTER II

ADMINISTRATION

(A) STAFF AND FUNCTIONS

Table I shows the establishment of classified staff. Some categories of the Professional and technical staff were still under establishment. The Table includes officials serving on secondment with Local Government Authorities.

Personnel

TABLE I

Statistics of Classified staff Establishment covering the period 1.7.1963 to 30.6.1964.

CHAPTER III

PUBLIC HEALTH

(A) HEALTH OF OFFICIALS

| NATIONALITY | No. of Officials Employed | No. Placed on Sick List | No. of Days Sick | AVERAGE DA for all Officials | For those who were Sick |
|--------------|---------------------------------|-------------------------------|------------------------|------------------------------|-------------------------|
| Sudanese | 19,954 | 12,613 | 46,423 | 2.33 | 3,68 |
| Non-Sudanese | 384 | 55 | 203 | 0.53 | 3.69 |

(B) GENERAL HEALTH EXPANSION OF HOSPITAL SERVICES

The following Hospitals were opened for work during the year:

| HOSPITAL | | | | | No. of Beds: |
|--|-----|-----|-----|-----|--------------|
| December 1997 - Production Statement 1997 - Production Sta | | | | | |
| El Managil (Blue Nile Province) | • • | • • | • • | • • | 60 |
| Hassaheissa (Blue Nile Province) | • • | | • • | • • | 60 |

The building of the following 60 bedded Hospitals was completed during the year. They will operate soon:—

Kuttum (Darfur Province)

Ghorashi (Blue Nile Province)

Yirrol (Bahr El Ghazal Province)

Hawata (Kassala Province)

Other buildings that were completed during year appear in the following list:—

| PROVINCE | LOCALITY | Building Erected |
|----------------|----------------------------|--|
| Bahr El Ghazal | Wau Wau Wau | Senior Standard house for Medical Officer M/Standard house for Medical Officer Health Centre |
| | Aweil Wau | 2 Thirty—bedded wards Midwifery School |
| Blue Nile | Sennar Sennar Sennar | 12 bedded Maternity Ward 16 bedded Male 2nd. Class Ward 16 bedded Female 2nd. Class Ward |

| PROVINCE | | LOCALITY | UILLDINGS ERECTEDB |
|------------|---------|----------------------------------|--|
| Kassala | | Kassala " " " " El Gedaref | Dental Out-Patient Department House for Physician House for Dental Surgeon Additional wards for 1st. Class Nursing School New—Out—Patient Department |
| Equatoria | •• •• | Sources Yubu Li-Rangu | Maternity Ward House for Medical Assistant Office for Bash Mumarid |
| Kordofan | | El Obeid Um Ruaba El Nahud | Eye Hospital Children Ward Mess for Nurses |
| Northern | • • • • | Atbara | 4—roomed quarter Additional rooms to quarters Alteration to Sisters Mess |
| Upper Nile | • | Malakal | Female 2nd. Class Ward |

The Programme of expansion of Dispensaries and dressing Stations included the following additions:

| VINCE | | | New Dispensaries | New Dressing Stations |
|-------|--|---|---|--|
| TOTAL | | • | 1 10 4 - 3 - 6 - 24 | 1 - 10 3 3 1 |
| | | | | VINCE Dispensaries <td< td=""></td<> |

TABLE 4

WORK DONE IN HOSPITALS AND DISPENSARIES FOR 10 YEARS

| YEAR | | | Admissions | Attendances | Operations |
|---|--|--|--|--|--|
| 1954/55 $1955/56$ $1956/57$ $1957/58$ $1958/59$ $1959/60$ $1960/61$ $1961/62$ $1962/63$ $1963/64$ | | | 171,092 154,093 176,761 175,543 216,538 185,601 190,962 219,188 205,020 213,489 | $16,453,892 \\ 17,694,550 \\ 20,430,070 \\ 21,410,339 \\ 24,730,031 \\ 23,999,256 \\ 29,932,923 \\ 28,970,936 \\ 33,697,201 \\ 37,397,118$ | 38,285 $38,287$ $53,839$ $50,023$ $64,556$ $86,771$ $88,992$ $109,731$ $124,409$ $107,232$ |

There were 133 licensed private practitioners working independently during the year under review. The figures of their work do not appear in the above list.

ACTIVITIES OF SPECIAL DEPARTMENTS IN HOSPITALS

Dental Clinics

Work done by these departments in all Provinces during the year is as follows:—

| Number of Attendances | | • • | | | 142,132 |
|---------------------------|-----|---------|-----|-----|---------|
| Extractions | | | | • 0 | 91,220 |
| Conservations | | | | 0 3 | 6,616 |
| Scaling and Gum Treatment | a • | | 2 2 | 9 0 | 35,228 |
| Minor Oral Surgical Cases | • • | | | | 2,961 |

X-Ray Treatment-Khartoum

Number of X-Ray Films taken for Out-Patients and In-Patients during the year was 35,462.

Physiotherapy Department—Khartoum

Number of attendances during the year was 46,908. Total number of patients was 2,782.

(C) VITAL STATISTICS

Below is the estimated population of the Sudan rendered by the Department of Statistics as on 30th. June, 1964.

Table 5

Table 6

Estimated Population of Khartoum, Khartoum North and Omdurman

| Khartoum | 0 7 | | • • | | | | 136,000 |
|----------------|-----|-----|-----|-----|---------|-----|---|
| Omdurman | • 4 | o o | • • | | o e | | 167,000 |
| Khartoum North | • • | • 4 | | • • | | • • | 57,000 |
| Rural Areas | • • | | • • | • • | • • | | 321,000 |
| | | | | | | | described between pattern and between building. |
| | | | Tor | CAL | | • • | 681,000 |
| | | | | | | | was becaused somethy because Courses |

These figures include migrants in the Three Towns.

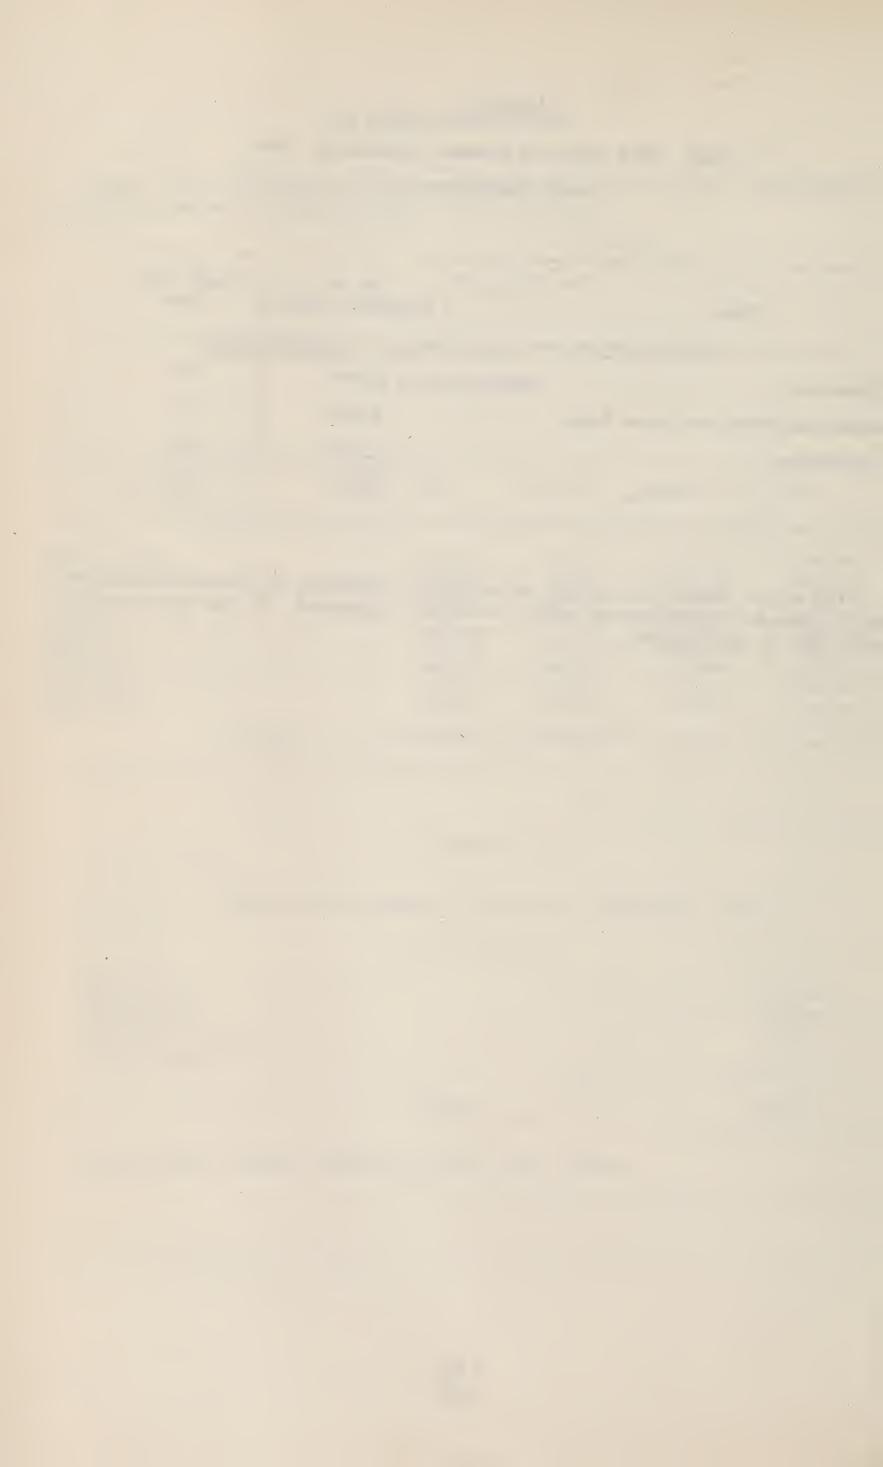

TABLE 7

Crude Birth Rate—Khartoum, Khartoum North

and Omdurman

| Town | | No. of Registered Births | Crude Birth Rate |
|--------------------------------|-----|-----------------------------|---------------------|
| Khartoum | | 6,535 | 48.1 |
| Khartoum North and Rural Areas | • • | 6,685 | 17.7 |
| Omdurman | | 6,398 | 38.3 |
| Total | | 19,618 | 28.8 |

The above figures show births attended and registered by licensed midwives. Births attended by unlicensed midwives are not registered. So the above crude birth rate is not complete.

(D) PREVENTIVE MEDICINE

1. Insect Borne Diseases

(i) Malaria. This disease is one of the major Public Health Problems. Residual adult mosquito control with Gammexane Spraying is gradually being expanded in all Provinces. Larval control is being effected in big towns with gradens and Agricultural Schemes.

Following tables give figures for cases and control activities.

Table 8

SUMMARY REPORT OF THE MALARIA SERVICE'S ACTIVITIES

1963/1964

1. Malaria Pre-Eradication Programme (W.H.O. assisted, Sudan-6)

The Malaria Pre-Eradication Programme of the Republic of the Sudan, which has officially commenced in 16th. June, 1963, has during 1963/64 laid its main emphasis on the assessment and evaluation of the already existing General Health Service. A preliminary assessment has been conducted in Sennar R.C. area on its basis the guidelines were developed for the procedure adopted for the country-wide surveys, which cover all curative health establishments as well as the preventive services. All information is being gathered by the staff of the Malaria Pre-Eradication Programme. So far the assessment was completed in Northern Province and in Kassala Province Southern Division, surveys being in course in Red Sea Area. Evaluation of the data of Northern Province has reached an advanced stage.

The General Health Service survey is to form the basis for the planning of the Basic Health Service, whose development is to be geared towards granting an optimum of health facilities to the population, and providing maximum support to the future Malaria Eradication Programme of the Sudan.

For the purposes of assessment, planning and development of the General Health Service as well as for the running of the future Malaria Eradication Programme, the Sudan has been divided into 4 major regions, which probably also will form the stages of both programmes:—

REGION I : Northern Province, Khartoum Province, Kassala Province,

and Blue Nile Province—Northern Division.

REGION II : Blue Nile Province—Southern Division, Kordofan Province,

and Renk R.C. (Upper Nile Province).

REGION III : Darfur Province.

REGION IV : Upper Nile Province (Without Renk R.C.), Bahr El Ghazal

Province, and Equatoria Province.

The Malaria Pre-Eradication Programme has also initiated action towards standardization of malaria drug treatment and laboratory diagnostic procedure.

2. Malaria Eradication Training Centre, Sennar (assisted by WHO and German Government)

After suitable premises became available in Sennar, the Malaria Eradication Training Centre has been established with all necessary installations and equipment. A re-orientation and refresher course was held in September/October, 1963 for all national personnel of Malaria Pre-Eradication Programme, Malaria Eradication Training Centre, and Malaria Eradication demonstration and Training Operations, Khashm El Girba.

Shortage of national and international key personnel has impeded the timely continuation of the Training Centre's activities. Meanwhile the staff was engaged in assisting the former Malaria Pilot Project in Sennar R.C., which is to be converted into Malaria Eradication Demonstration and Training Operations, serving as a Field Training Area for the Centre.

3. Malaria Eradication Demonstration and Training Operations, Khashm El Girba

In October, 1963 the Resettlement Area of Khashm El Girba and a buffer zone along the Atbara River, extending from Showak in the south to Goz Regab in the north, were selected for Malaria Eradication Demonstration and Training Operations, following a request by the Ministry of Health. The programme was under the technical guidance, advice and evaluation by the Malaria Pre-Eradication Programme, Ministry of Health.

After training of the relevant staff, epidemiological and technical surveys as well as geographical reconnaissance were carried out and a Plan of Action prepared which envisages the simultaneous running of attack phase operations by spraying with D.D.T., and of active and passive case detection.

All resettlers leaving Wadi Halfa area were given malaria drug prophylaxis, which was followed up in the Resettlement Area until they were established in their new homes, where they were immediately covered by the case detection system.

General spraying operations were carried out in November/December, 1963 and in May/June, 1964, using D.D.T. 75 per cent w.d.p. at a dosage of 2 g techn. DDT/m2

(ii) Blackwater Fever

1 case was reported this year compared to 1 case last year.

(iii) Relapsing Fever

No case was reported this year. Last year also no case was recorded.

Table 9

Relapsing Fever cases and deaths over the last ten years

(iv) Leishmaniasis

4,206 cases were reported this year as compared with 2,486 cases last year. Most of the cases were reported from Blue Nile, Upper Nile and Kassala Provinces.

(v) Trypanosomiasis

New cases detected were 27 with 4 deaths. In 1962/63 cases reported were 41 with no deaths.

The disease is endemic in the western Districts of Equatoria Province. Regular Sleeping Sickness inspection is carried out in all endemic areas for case finding. Chemoprophylaxis was being conducted during the first three months of the year, in Yei District.

Following Table shows the distribution of cases for 10 years in Equatoria Province.

Table 12

(vi) Filariasis

4,202 cases were microscopically diagnosed during the year, of which 4,051 cases were reported from Equatoria Province.

2. EPIDEMIC AND ENDEMIC DISEASES

i) Yellow Fever

No case of Yellow Fever was reported this year.

(ii) Anthrax

39 cases with 1 death were reported this year, out of which 29 cases were reported from Kassala Province.

(iii) Cerebro Spinal Meningitis

927 cases with 102 deaths were reported during the year as compared with 1559 cases and 137 deaths last year.

Table 13

(v) Dysentery

6,416 cases were treated in hospitals as in-patients and 316,975 cases as outpatients.

(vi) Enteric Fever

2,426 cases with 158 deaths were reported during the year.

TABLE 17

| 1963/64 | | | | | 2,426 | 158 |

(vii) Gastro-Enteritis of Children

Records of Hospitals and Dispensaries registered 312,032 cases of which 8,159 required hospitalization with 753 deaths (a fatality rate of 9.1 per cent of the total admissions).

(viii) Leprosy

During the year 458 new cases were diagnosed bacteriologically positive of which 350 cases were distributed between Equatoria and Bahr El Ghazal Provinces.

(ix) Poliomyelities

250 cases were reported this year of which 124 received hospital treatment with 3 deaths. Last year 243 cases with 4 deaths were reported.

(x) Hydrophobia

18 cases of human rabies were admitted to hospitals this year.

(xi) Small-Pox

No case of Small-Pox was reported this year compared with 95 cases with no death last year.

The country-wide vaccination campaign against Small-Pox which started in December, 1962, assisted by the World Health Organization, was continued during the year. The Provinces covered and vaccinations performed during the year were as follows:—

| Blue Nile (Northern Division)—(December, 1 | 963N | Tarch, | |
|--|------|--------|-----------|
| 1964) | | | 1,030,500 |
| Khartoum—(June, 1964) | | | 745.095 |

(xii) Influenza

98,996 cases with 8 deaths were reported during the year compared with 82,033 cases and 22 deaths last year.

(xiii) Tuberculosis

During the year routine testing and vaccination in the Provincial Permanent Centres continued.

The numbers tested and vaccinated in these centres totalled respectively 273,904 and 154,891.

The mass-scale operations continued in the Blue Nile Province and Wadi Halfa District.

Following is a table of tests and vaccinations performed during the year:—

JULY, 1963 - JUNE, 1964 BY ALL CENTRES

3. HELMENTHIC DISEASES

(i) Anklystomiasis

16,785 cases were recorded this year, of which 14,628 were reported from the Southern Provinces.

(ii) Dracontiasis

4,345 cases were treated during the year, of these 3,722 were reported from the Southern Provinces.

(iii) Bilharzia—(Schistosomiasis)

67,556 cases were recorded during the year.

The Snail Control continued on the same lines as before *i.e.* mechanical trapping chemical traps and regular inspections in search of snails.

(E) SANITARY CIRCUMSTANCES

Water Supplies

Improvement of town and rural water supply continues. Controlled water yards and protected Haffirs and deep bore wells for rual and nomadic areas are expanding.

Refuse Disposal

Mainly in towns, this is being carried out by orthodox methods of daily collection, dumping, and burning.

Sewage Disposal

The sewage works in Khartoum Town are gradually replacing the bucket system. It has not yet covered the whole town.

In other towns bucket system, aqua-privy, septic tank and pit latrine are in use.

Housing and Town Planning

The usual measures to ensure good housing and avoid over-crowding and insanitary conditions are being taken by the authorities concerned in re-planning town expansion and new layouts.

ealth Visitors School-Omdurman

Although the School was only opened in November, 1959, the training of Health isitors actually began in 1947.

Fifty-three Health Visitors were trained between 1947 and 1959 of whom we have died, two retired, two resigned, and two discharged.

In 1957 the course was extended from nine months to one year, and designed order to combine the training of Health Visitors and Staff Midwives.

Thirty-six Health Visitors/Staff Midwives have been trained since 1959 bringing the total to eighty-nine, of whom eighty-one are working as follows:—

- 1 Principal Matron.
- 7 Superintendant Nursing Officers.
- 9 Superintendants of Midwives Schools.
- 64 Staff Midwives/Health Visitors.

Twenty-two Health Visitors/Staff Midwives graduated during the period 1963/64 nd twenty-three are at present under training.

Iaternal and Child Health

Maternal and Child Health Services continue to improve. Three Health Visitors were posted to the Halfa Resettlement Area in Khashm El Girba where ix new centres are now functioning.

UNICEF is assisting in this service by provision of necessary equipment and pooks for training and supply of milk and vitamins for use in the centres. All entres were assisted in this manner during the year.

Following list shows localities where health centres are operating:-

Mental Health

25.603 cases were seen during the year by the Psychiatrist at the Clinic for Nervous Disorders. Khartoum North; 13,692 were interviews for males and 11.911 interviews for females. 3,606 were new patients and the balance representing the return attendances.

The number of medico-legal cases interviewed at Keber Institute was 585.

Table 33 shows categories of Diseases in Mental Cases.

The Mental Diseases Board saw 16 cases during the year. The findings of the Board were as follows:

- 3 Cases fit for Government Service.
- 7 cases unfit for Government Service.
- 6 cases fit for temporary service or referred for treatment and to re-appear before the Board at specified dates.

TABLE 33

Health Education

The weekly Radio talks and Health Exhbition during tribal gatherings and agricultural shows, and press articles remained to be the media and methods for Health Education.

The audio visual aid unit in Khartoum continued its activities and is attempting to produce local films, film strips, photos, posters and models on the local health problems of the country.

CHAPTER V

PORT HEALTH QUARANTINE

Sea and Airports remained clear of infection during the year.

Disinfection were undertaken at Wadi Halfa, Port Sudan, Kassala, Khartoum,
Juba, Malakal. Geneina, El Fasher and El Obcid.

The Aedic Index was calculated on an inspection of all habitations within the area concerned. The following table shows the aedic index throughout the year at the local airport on the international routes:—

Table 34

Port Sudan Quarantine

Total ships inspected were 1197. An increasing number of ships has been asking for Radio Pratique.

Suakin Quarantine

14,975 Sudanese pilgrims left for Jeddah this year; 8707 of whom left by air from Port Sudan and 6268 left by sea from Suakin.

All out-going pilgrims were compulsorily immunised against Cholera, Small-Pox and Yellow Fever.

The pilgrinage was declared by Saudi Arabia Kingdom as free from epidemic and quarantinable diseases.

Khartoum North Pilgrimage Transit Camp

3309 pilgrims passed through the camp during the year and have received the necessary inoculations against Cholera and Yellow-Fever and vaccinated against Small-Pox before their departure.

Medical Mission to Hedjaz

The Medical Mission consisted of three Doctors (two from Ministry of Health and one from Medical Corps), four Medical Assistants, one Store-Keeper. one Laboratory Assistant, 13 Nurses and Midwives and two other auxiliary staff.

Treatment Centres were established at Jeddah, Mecca, Medina, Muna and Arafat. Medical Care and attention were given to all pilgrims and local inhabitants who sought for them. 23,097 patients were attended to.

Wadi Halfa Quarantine

Examination of labourers coming from United Arab Republic was carried out before their entry into the Sudan.

311 river vessels and 332 aircrafts were inspected during the year. 16.650 vaccinations against Small-Pox were done in the quarantine. The total number of persons who passed through Wadi Halfa Quarantine was 28,543.

Geneina Quarantine

13,227 persons passed through El Geneina Quarantine. 9,590 vaccinations against Small-Pox were done in El Geneina Quarantine.

CHAPTER VI

MEDICAL TRAINING

School of Hygiene

20 students were under training in the First Class.

Basic education requirements for entry into the School is completion of Secondary Education. The students take a three years course at the end of which they must pass the Royal Society of Health Examination.

In their first year of study the students are given General Science, Building Science, Drawing and Construction Technicology, Levelling and Geometry in the Khartoum Technical Institute.

During the school vacation, the students receive a further practical rural tuition in the Provinces.

Medical Assistants Training School

38 Medical Assistants graduated from the School this year.

A new batch of 49 students were accepted in the School.

Training of Nurses

42 Hospitals are now recognised as Local Training Centres for hospital nurses.

556 nurses sat for the Nursing Examination this year. 446 successfully passed the Examination; of these 356 were males and 90 were females.

Laboratory Technicians and Assistants

No new technician trainers joined the Stack Medical Research Laboratories, but four trainees completed their training successfully.

Two Laboratory Technicians returned from their study courses abroad, one of them after doing one year's training in Bacteriology in Glasgow and the other, one and a half year in Beirut in Medical Laboratory Technology.

Eleven Laboratory Assistants were trained during the year.

Three Yemenite candidates came for training in the Research Laboratories at the request of the World Health Organization.

The police cadets from the Police College Khartoum attended a course of lectures and practical training in Forensic Medicine. A total of 16 lectures were given.

Dispensers Training School

The curriculum of the course includes recapitulation of Basic Science, i.e., Elementary Chemistry, Elementary Physics and Biology. Stress, is made on Practical Dispensing and Pharmaceutics.

The total number of Students in the School at present is 5.

Training of Radiographers

6 candidates wre taken for training in 1963/64.

The School of Radiology gives a course of Training for two years for candidates of School Certificate level.

Theoretical teaching is given in Electricity, Photography, Anatomy, Nursing as well as in Radiographic methods and practice. All allied fields of study are dealt with according to their degrees in connection with Radiography.

Practical Radiography, Dark Room Practice and the practical handling of machines, X-Ray hazards and all allied subjects are dealt with.

Eye Hospital-Khartoum

Students for the School had been selected from the Certificated Mumarids (Rais Anbar or Wakil Rais Anbar Status) The duration for study in the School is two years. The students have studies in Eye Disease, Elementary Anatomy and Physiology, and Diseases which have an effect on the eye.

So far 32 Ophthalmic Assistants were graducated.

9 students are at present in the School.

Training of other Staff

The School Training of Higher Nurses is mentioned under the World Health Organization Assisted Projects.

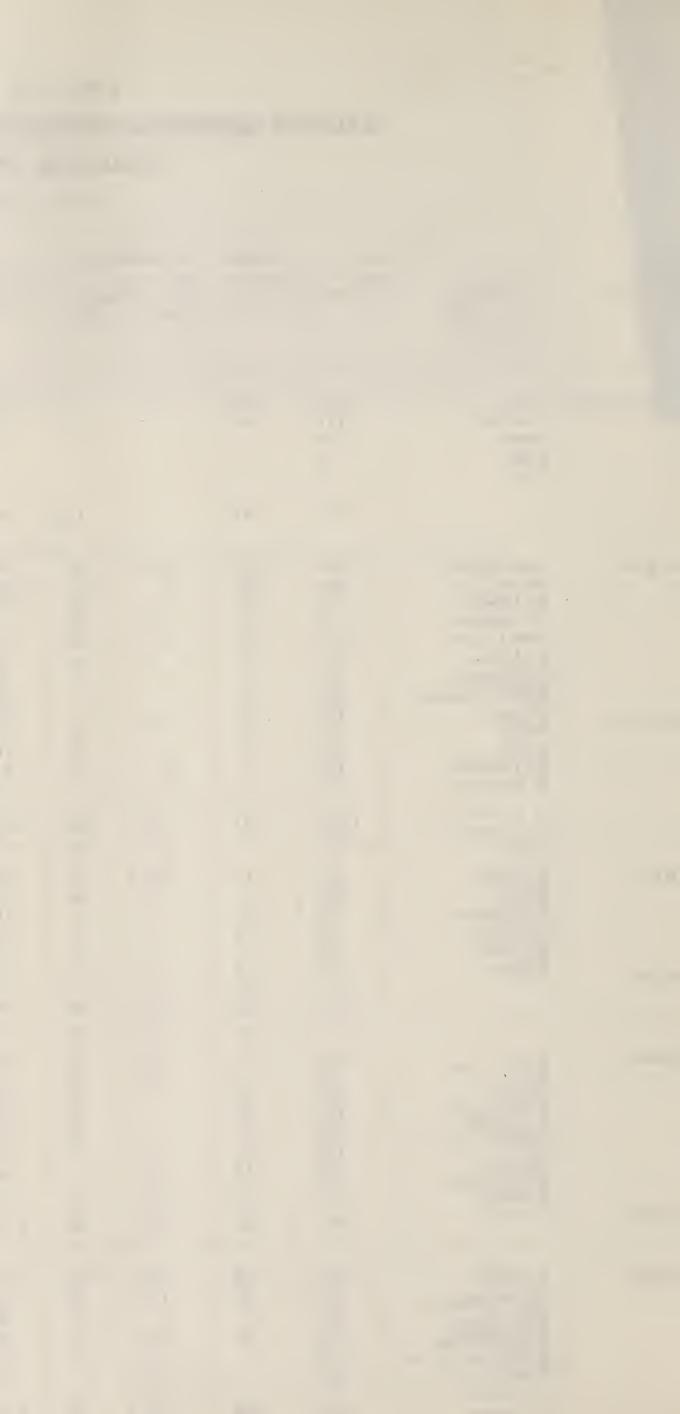

The Training of Midwives and Health Visitors is mentioned under the Chapter of Social Hygiene.

CHAPTER VIII

ANNUAL REPORT 1963,64

of the

STACK MEDICAL RESEARCH LABORATORIES

From the period from 1.7.63 to 30.6.1964

By

DR. M. H. SATTI

This report covers the period from July 1st. 1963 to June 30th. 1964 during this period research has been carried out on Kala-azar. Jaundice, mainly infective hepatitis and an obscure encephalomyelius known locally as "Weal disease." Summaries of these and other subjects will be found under the appropriate headings.

A great part of the time of the staff was spent on teaching the technicians, female nurses from the Khartoum Nursing College, Pelice Cadets and Laboratory Assistants.

Among visitors to the Laboratories were Sir Graham G. Wilson ex-director othe Public Health Laboratories of England and Wales and Professor Evans, Professor of Bacteriology in the London School of Tropical Medicines and Hygiene. Professor Hasselman of Erlangen and Professor A. Herlich of Munchen on W.H.Osmall-pox advisory assignment. Sir Graham came to advise on the New Medical Research Institute.

The Director attended a meeting of the Scientific group on yellow fever in October, 1963 and a seminar and training courses on tables in June, 1964, in Moscow U.S.S.R. and in Geneva.

Staff Changes

Dr. Sayed H. Daoud returned from U.K. after obtaining the Ph.D. in pathology from the University of London. He was also ejected a founder member in the newly formed College of pathologists. In June. 1985. Dr. Ahmed Mahmoud Abbas obtained his Diploma of Bacteriology from London. He is expected to return after doing a few weeks training in Colindale with Dr. Taker on Salmonellas.

Dr. Awad El Sid Mustafa joined the Laboratories as a Registrar. Two more B.Sc. students joined the Medical Zoology and Ladernic diseases in the Laboratories. One is to train as an animal ecologist and the other as medical entomologist. This latter will join the Malaria section. Sayed Mohamed Hussein Hassan, the superintendent of the Laboratories retired after over thirty years service. Lab. technician. Sayed Ahmed Mustafa Salih's secondment to W.H.O. in Somalia has been extended for another year.

Education and Routine Activities

No new technician trainces joined the Laboratories but four trainees completed their training successfully.

Lab. Technicians Bashir Mohd. Ahmed and Mudather Pahiker returned from study courses abroad, the former after doing one year's training in Bacteriology in Glasgow and the latter one and half year in Baint. Mudather obtained a Certificate in Medical Laboratory Technology from school established jointly by W.H.O. and the Government of Lebanon.

Eleven Laboratory Assistants were trained during the year.

Three Yemmenite candidates came for training in these laboratories.

The police cadets from the Police College Khartoum attended a course of lectures and practical training in Foreinsic Medicine. A total of 16 lectures were given.

Technician Class

Attempts were made to start a class of 20 technicians but results were so far abortive. There were only 4 technician trainees this year.

A summary of the routine work and research carried out during the year is appended to the report. The total number of examinations was 48,903 compared with 49,792 in the previous year.

Forensic Medicine

The teaching of Forensic Medicine of both medical students and police cadets has been carried out by the director.

The requests for Medicolegal examinations by the police continues to increase and constitutes a wide coverage; from identification of herbs and native drugs to various toxicological and blood tests.

A provisional approval has been obtained to employ a whole time specialist and a technician. Both will be expatriates. Applications were examined and contacts are on the way to employ an expatriate to carry out the work as well as help in organizing the new department.

Lymph Vaccine

4,997,400 doses of vaccine were made this year as compared to 1,334,900 last year.

A campaign of small-pox eradication is going on with freeze dried small-pox vaccine. This is a Russian made vaccine.

Freeze dried lymp vaccine has been made in these laboratories but owing to the inadequate accommodation as well as equipment and other facilities like inefficient air conditioning and the lack of dust proof quarters the bacterial count is high and the potency is somewhat low. The lack of sufficient number of trained personnel is another set-back.

Unless and until these difficulties are overcome, it will not be possible to make freeze dried lymp vaccine in these labs. Only wet vaccine has to continue to be produced in these Labs.

It is considered essential that the building of the vaccines and sera Institute should be seriously and urgently considered for next year, if we want be self-efficient from the point of view of vaccines and sera. When this Institute is in full operation it will effect considerable saving in hard currency (40,000—100,000 pounds sterling per annum).

STACK MEDICAL RESEARCH LABORATORIES DEPARTMENT OF MORBID ANATOMY, HISTOPATHOLOGY AND FORENSIC MEDICINE

By

E. H. DAOUD, D.M.S., Ph.D., M.C. Path

The specimen received during the period 1.7.1963—30.6.64, were 1462 including ynacological specimens. This figure is far less than the number of specimens tated in the previous report.

The following analysis, deals with specimens received during the period of 2.5.64 to 30.6.64, when I started work after my return from the U.K. This inludes specimens received from Kartoum Hespital during the faculty of ledicine's summer vacation.

| Total number of | specime | ns rec | eived | | • • | 367 |
|-----------------|---------|--------|-------|-----|-----|---------|
| Gynacological | • • | | | • • | | 138 |
| Others | • • | | • • | • • | | 229 |

The number of specimens received in the same period last year is 447 which hows a decrease of 89.

Note:

Malignant Lymphoma of Burkitt

This tumour first described in some parts of Africa by Burkitt, has been also reported in the Sudan. Three cases have been sent during this period by Mr. Ismail Nabrie (F.R.C.S.) from Port Sudan further to his cases sent from Juba. Two other cases have been sent from El Fasher by Mr. Kamal Bushra (F.R.C.S.) It will be of interest to keep a look out for this tumour and do an on the-spot work on its extent and whether it is associated with viral infection born by special types of mosquitoes.

2. Benign tumours

3. Inflamatory

| Tuberculosis | | | • • | | • • | 8 |

| | | | | | | |
| | | Тот | AL | • • | | 78 |
| | | | | | | |

Maduramycosis

Geographical distribution of Maduramycosis within certain latitudes of the Sudan (North of lat. 14 degrees North), has been alluded to by some workers. It is important that this fact should be investigated and studied extensively as it may have an important bearing on the epidemic and therapeutic aspects of the disease.

Cytology

A start has been made in cytological diagnosis of malignant disease which mostly consisted of cervical smears from females with post-menopausal bleeding together with Sputa, pleural and peritoreal effusions.

It is felt that a clinic for screening of women by cervical smears when they attend antenatal, post-natal and gynacological clinics will be great of value in proplylaxis of cancer of the female genital tract.

Screening by prostatic massage in all patients with prostatic enlargement has proved to be the most valuable single test for malignancy of the prostate and bladder. It is felt, therefore, that a technician full time should be sent to the U.K. to train in cytological technique and screening of slides to help establish these clinics.

Rabies

This department continues to do diagnosis examination for suspected rabies in brains of animals. The method used is the histological method staining by Leppine stain. Some work in conjunctions with Verterinery Research Sections is in progress to compare the suitability of different diagnostic methods for rabies including the Fluorescent anti-body technique. It is hoped that this work which is of great public health importance will find the necessary financial support to buy a cryostat and a deep-freeze.

Medicolegal

This laboratory continues to serve the whole country in medicolegal laboratory work. The work mostly consists of identification of blood stains, blood grouping and suspected seminal stains. The total number of medicolegal specimens in the period 1.7.63 of 30.6.64 is 380.

Post-Mortems

Demand for consultation in post-mortems examination is still a burden on the department of pathology catering as it does to all the Three Towns. I suggest that a meeting of all the parties concerned should be convened to streamline the services until a more permanent arrangement is set up.

STACK MEDICAL RESEARCH LABORATORY

PATHOLOGY DEPARTMENT

The pathologist report as follows:—

The number of specimens received in this department from 1st. July, 1963, till 13th. May, 1964, during my service in this department, in a very small increase on concerning on previous year. Also very small increase of malignant tumour.

| Figures are as follows:— | |
|--|---|
| 1. Total Biopsy Specimens/for above period 1. Total neoplastic disease of above number benign tumour malignant tumour | $\begin{array}{ccc} & 1,229 \\ & 475 \\ & 259 \\ & 216 \\ \end{array}$ |
| Analysis from above figures by groups are as follows: (i) Squamous carcinoma (ii) Glandular carcinoma (iii) Sarcoma (iv) Lymphomas and vascular tumours (v) Adamantioma and teratoid tumours (vi) Melanoma and retinoblastoma (vii) Secondaries and Undifferented tumours | 83 39 49 6 10 17 |
| Total Analysis from above figures by anatomical locations are | 216 |
| 1. Lymphatic tract 2. Respiratory tract 3. Upper digestive tract 4. Lower digestive tract 5. Abdominal cavity 6. Unirary-male-genital 7. Urinary female-genital 8. Musculo-scelatal system and eyes 9. Special and endoctrine glands 10. Organs non specified Total | $ \begin{array}{r} 6 \\ 11 \\ 4 \\ 3 \\ 25 \\ 7 \\ 49 \\ 48 \\ 12 \\ 51 \\ \hline 216 $ |
| Total Gyneacological pathology: (a) Total gyneacological specimens (b) Total andometrial | 350 120 |

Out of endometrial specimens they show endometrial phase disturbance associated with sterility or heavy bleeding in metrophathia. In this above number include 8 specimens which show material of conception.

II. Forensic Medicine-Medico-Legal Case:

Total number for this year including my period of service are:

Total seminal specimens 380
Total Blood Specimens 38

Details see in group report.

III. Post Mortem Examination:

During the period of my service I had 13 post mortem including Khartoum and Omdurman Hospitals; of that 3 police case other 9 natural deaths.

ANNUAL REPORT OF THE MEDICAL ENTOMOLOGY SECTION FOR THE YEAR 1963/64

The work of the Section continued on the following lines:—

- (1) Collection was made by the Section of insects of medical interest with special reference to Anopheline and Culicine Mosquitoes, Sandflies and other Diptera.
- (2) Specimens thus collected and those sent to the Section from different parts of the country were identified and reports submitted to the Under Sectorary, Ministry of Health with copies to the Director, Research and the P.M.O.H. of the Province concerned.
- (3) With the concurrence of the Under Secretary and Director Research a circular letter was issued to the P.M.O.H's and S.P.H.I. with the request to send to this Section as much collection of Medical insects as possible. Equipment for collection of insects was also supplied to these working in the field in the different Provinces whenever they asked for it.
- (4) Colonies of the yellow fever mosquito Aedes aegypti and Musca are being maintained in the laboratory as they are used for testing different insecticides.
- (5) Experiments on the susceptibility of Phlebotomus to various insecticides continued in the Section. The W.H.O. kit was used for these tests. A paper has been written on the results of the experiments which has been accepted for publication by the Sudan Medical Journal.
- (6) With a view to keeping in touch with the most recent developments in the field of research useful for control of vectors of human disease, contact has been maintained with the World Health Organization, Geneva that has been kind enough to supply the Section with material such as the various kits for test from time to time. More details are given in the following under the head "Irritibility of Mosquitos to Insecticides."

Culicidae

In all 21 species belonging to 5 Genera and 11 subgenera were recognised in the collections, of which 4 accounted for the genus Anopheles, 6 for, Culex, 9 belonged to Aedes, one to Mansonia and one to Uranotaenia. The anopheline subgeners were Anopheles and Myzomyia; the culicine were Culex, Culiciomyia and Lutzia; the aedine were Stegomyia Diceromyia, Aedimorphus, Neomelanoconion and Mucidus, and Mansonirrdes was of the genus Mansonia.

In order to study the Anopheline fauna of Khashm el Girba with special reference to malaria transmission in the area a technical assistant was stationed there for a few months.

Biting females of A. pharoensis were daily collected at and arround Medani for testing its susceptibility to DDT and other insecticides and to conduct irritibility tests with the kit provided by the W.H.O.

Phlebotomina

Phlebotomine sandflies were collected from Khashm el Girba, Roseires, Tozi and other places. A total number of 633 specimens were identified, in which ten species were recognised. *Phlebotomus papatasii* females were daily collected from Medani and arround the town for tests on susceptibility of the fly to different insecticides as mentioned above.

Chironomidae

In the report of the Section for 1962/63 it was mentioned that Dr. W. Wulker, the W.H.O. consultant visited the Sudan for a short period viz., about a month in connection with the 'nimitti.' The chief purpose of his visit was to obtain material and to report on the potentialities of biological control against nimita and the feasibility of developing practical biological control procedures for integration and invesigations at Medani, and taking part in some of his excursions and invistigations at Medani, and having fully discussed various aspects of problems such as the:—

- (i) detection of any natural parasites in the adult or the early stages the midges
- (ii) the effect of the parasitization on the insect
- (iii) the host parasite specificity
- (iv) the method of rearing the parasites in large number in the laboratory; large enough to parasites the early stages to result in an effective control and the allied problems the Medical Entomologist had given a brief note on the subject in the last report. Since then Dr. Wulker has been able to complete his report on his findings in the Sudan which he has submitted to the W.H.O. and has kindly sent us a copy. This report may be briefly summarised here as follows:—

The new taxonomic name of about the commonest green midge is now changed from Tanytarsus lewisi freeman to Cladotanytarsus lewisi (freeman).

Dr. Wulker's stay in the Sudan lasted from 1—28 March, 1963; at Khartoum from the 1st. to 9th. March and again from 21st.—27th. March; and he visited Medani (9th.—18th. March). During these visits and the work at Khartoum he tried to detect the endemic enemies of the midges. His main aim was to find endoparsites that kill or sterilize the insect host and thus be useful for the decimation of the pest.

Endoparasitic worms. Parasitic worms inside the body of the adult insect were detected by him in the following four species in the Sudan.

(1) Microchironomus stilifer (2) Cryptotendipes graminicolor (3) Harnischia nudiforceps and (4) an undetermined species of Chironomariae (Dicrotendipes). The places where infections were demonstrated were Khartoum. Wad Medani and Wadi Haafa. Besides the infected adults two inected larvae were found among small samples of larvae taken by grab from the bottom of the river. These larvae were recognised as Microchironomus stilifer (Khartoum) and Harnichis spp. (Wad Medani). The percentage infection was very low, not exceeding one per cent. Only one species of the helminth parasite was present and it seems the worm is restricted to only the Cryptochironomus group. The effect of parasitic and the hosts was intersexuality in males and absence of ovaries in the parasitized Cryptotendipes females. Among other natural enemies of Chironomida. may be mentioned the larval water mites attached to adults, which did not seem to affect either the vitality or fertility of their host.

Commenting on the appropriate biological control measures the report says, The development of appropriate biological control procedures is not a matter for the simple adaptation of existing techniques. Rather it calls for pioneering studies which, if successful, would open the way towards wider application of vector control through such agents as endoparasitic worms, besides clarifying neglected areas of cology and parasitology. Of course, as in the case of all such pioneer programs success would by no means be guaranteed.

The need for a thorough taxonomic study of the host insects and their parasites is rightly stressed by Dr. Wulker. Since modern chironomid taxonomy requires a knowledge of all developmental stages, relationship established between theadults and the early stages of a pest will facilitate its quick recognition.

He has agreed with Dr. Lewis that "a complete study of this nature would involve years of work." As to the identification of helminth parasites the best authority on the subject is Dr. H. E. Welch, of the Canadian Department of Agriculture Entomology Research for Biological control and a closer contact with him whenever necessary will be beneficial.

Host specificity in such studies where other useful fanua such as fish is involved, is of extreme importance. In this connection Dr. Wulker is of the opinion that none of the parasites of these insects thus far have undesirable secondary effects. For example, a fish breeding on parasitized chironomid larvae will not become infected by the parasite concerned, for these are specific for their insect host.

It is hoped that the above account makes clear the various aspects of the problem and the different technical studies involved in our attempt to embark upon the biological control of the chironomids in the Sudan which will be of any substantial contribution towards the integration of control procedures. However in future whenever facilities and technical know-how be available and above all the urgency for an integrated control of the pest be felt, various aspects considered above will have to be taken into account. Besides the routine work of the Section endeavour was as usual made to take up a problem of research during the year.

In view of the increasing importance that the irritability of anopheline and culicine mosquitoes to the residual deposits of DDT and other insecticides has gained recently and because of its bearing on control this kind of response of A. pharoensis to various insecticides was studied in the laboratory.

A pharaensis is a strongly anthrophlie mosquito and is incrimented in several parts of Africa as vector of malaria. Besides its being one of the vector of malaria, its easy availability in & around Medani was the factor that led to its choice as the appropriate mosquito for testing its irritability and the irritance of other insecticides besides DDT.

The irritability of an insect to an insecticide manifests itself in its excitation, by flying away from it which by some authors is termed as the behaviouristic resistance to the campaign of adult killing aimed against the insect.

This behaviour of the mosquito is likely to defeat the very purpose of giving it the necessary lethal dose which is expected to kill or render it incapable of performing the normal functions including feeding mating and reproducing.

With the object, therefore of measuring the irritability to insecticides of a sample of mosquito population and to also test the irritating characteristic of various chemical compounds, the World Health Organization has devised a kit.

Composition of the kit

The kit includes 30 small tubes for the pre-exposure of the mosquitoes, a special tube carrying box, and 3 light-proof boxes containing exposure chambers.

- (a) The pre-exposure tubes (or adaptation tubes) are small cylinders (5.5 x 3 cm) made of transparent plastic; one end is closed by a strip of the same material fitting into a groove; the other end carries a filter disc soaked in mineral oil; it constitutes the only internal surface of the tube on which the mosquito settles.
- (b) The tube carrying box made of light wood is 45.5 cm. long, 15.5 cm. high 7.5 cm. deep and opens along two of the long sides. It includes 30 cylindrical compsrtments; in each of these a pre-exposure tube is placed horizontally; all the bottoms of the tubes (on the side where the papers placed) are illuminated by a uniform light source of the same intensity as that illuminating the exposure box. The inside of the box is painted black.

The light proof boxes made of light wood are, 13.5 cm. wide the same height and 9.0 cm. deep. Light can pass through a circular hole (9 cm. diameter) in the back of the box. Inside there are 3 grooves, holding (1) a sheet of translucent glass to insure uniform illumination; (2) the filter paper, placed on another sheet of glass; (3) the exposure chamber, the opening of which is closed by a sheet of transparent plastic. The top of the box moveable and the front side consists of 2 doors; all the internal surface are painted black. Two such light proof boxes with an exposure chamber are used for tests with the insecticide while a third is used exclusively for observing controls.

The impregnated papers accompanying this kit consist of 2 packages each containing 8 paper impregnated with 2 per cent and 4 per cent DDT and one package with oil alone for the controls.

Experimental Technique

The method for conducting the experiments as recommended by the W.H.O. is briefly summarised below:

Pre-exposure

One mosquito is introduced into each of the pre-exposure tubes by means of an aspirator. The tube carrying box is now placed at a fixed distance from a source of light of known wattage to give an intensity of 8 foot candles. For different wattage and type of bulb different distance in centimetre is recommended, for instance for a clear bulb of 40 watts a distance of 25 cm. will give the required intensity of 8 foot candles, and a frosted bulb of the same wattage will have to be placed at a distance of 41 cm. to produce same intensity of light through the translucent glass and the paper. The mosquitoes are pre-conditioned for 30 mins. in this way, after which they are generally adopted to the illumination.

Exposure

Five mosquitoes are now taken from this lot and transfersed to the exposure chamber where an impregnation filter paper is already placed in groove so that the mosquitos can land on it besides the plastic cone which is not treated with any insecticide cone sitters can be made to sit on the paper by disturbing with a glass rod or a pencil from outside. Three minutes are allowed for the mosquitos to settle before counting of idividual take offs is started. This is continued for a period of 15 mins. and the number of take offs recorded which indicates the irritability of the insect to the insecticide.

A total number of 40 mosquitos (8 lots of 5) are exposed to DDT impregnated paper and 2 lots of 5 to control paper.

Modified Technique

The work started in the laboratory at first with laboratory bred Addess aegypti and then with Anopheles pharoensis.

It was soon realised that this technique could be slightly modified by skipping over one or two of its steps. This not only cuts down the time of experiments but also gives more accurate and dependable date which could be easily interpreted. In the first instance, since out laboratory bred mosquitos as well as those cought from the field are used to almost the intensity of light to which the W.H.O. recommends the specimens should be pre-exposed, we can sefely do away with the process of pre-conditioning them for 30 mins. in the pre-exposure tubes. Secondary because it is different to experiment with 5 or even more than one mosquito the following modified method was decided upon.

The age, condition of feeding and the sex of the mosquitos are noted. A single mosquito is transferred to the exposure chamber equipped with the control paper (paper impregnated with oil alone). This box is now placed at the required distance from a source of light fitted with a bulb of known wattage to give an intensity of 8 foot candles. The insect is allowed to settle down on the paper which it normally takes about 2 mins. After the lapse of this pariod counting of take offs is started and continued for a period of 10 mins, instead of 15 as recommended by the W.H.O

(b) Now the mosquito from the control chamber is transferred to the box fitted with a DDT impregnated paper and is allowed to settle down for which it takes about 2 mins. The mosquito thus exposed to the insecticide at first lifts its hind legs, flutters Its wings then moves about in excitement and then off. In order to determine the time taken by the mosquito before the first take off a stop-watch is clicked on. The running stop-watch is clicked off as soon as the mosquito has flown from the first time and the time noted in mins. and second, which is the excitation time taken by the insect. The stop-watch is also clicked on as soon as the mosquito took off and again clicked off as it settled down on the paper. This is done for each take off and the total time recorded which is actually the total time the insect was air-borne, or away from the impregnated paper and which may be termed the total time of avoidance. In Appendix C are furnished actual figures of 3 such experiments to give an idea of how observations were recorded. Three insecticides viz., DDT, Toxaphene and Delnav have been so far tested with fed and unfed females of Anopheles pharoensis on the one hand and with males on the other. total number of females tested was over 400 and the males approximately 200. Laboratory bred Aedes aegypti was also tested. These experiments will be continued into next year with other insecticides such as of the Carbamate group until we are in possession of data large enough to be interpreted.

Simulidae

With a view to recommending a compehensive plan for the control of Simulium in the country. Mr. Marr of the W.H.O. has been studying the pest for about a year now. His report is awaited. However collections were made by the Section at Abu Hamed during the year. In July last year the breeding of Simulium had almost tailed off until it reappeared in December when eggs larvae, pupae and very few adults were detected. In March this year while the Nile was about to start rising the density of flies at Abu Hamed was not very heavy.

Whether the insect is to be controlled or eradicated as a vector of *Onchocerciasis* in parts of the country where it is known to transmit the disease or also from places

where it is only a pest, depends largely on Mr. Marr's report. It may be suggested that its control or perhaps even eradication is possible where it occurs as an 'isolate' but large populations spread over an extensive area are extrementy difficult to control.

Hatchery - A colony of Aedes aegypti, a susceptible Sudan strain, is being maintained for several years now. The mosquito is used for insecticide testing both suceptibility and irritability.

A colony of Musca is also being maintained.

A standard susceptible strain of Musca maintained under the supervision of the World Health Organization at the Zoological Institute, University of Pavia, Italy is being supplied to different laboratories for comparison with local strains. This Section had also ordered for it. It was despatched by the said Institute but unfortunately by the time it arrived at Khartoum by air some of the pupae had hatched in transit and the adults died and the remaining pupae were not viable as some of them gave rise to adults since. The W.H.O. is contacted again for the same and as soon as a second batch of pupae is received a colony will be run in the Section.

Miscellaneous

Several touring and collecting parties from the Section visited Abu Hamed, Damazin, Roseires and Singa, Guneid, Khashm el Girba, Kosti, besides collections of *Anopheles* and *Phlebotomus* made in the Gezira area.

Visitors

H-E Dr. Ahmed Ali Zaki the Honourable Minister of Health kindly visited the Section in July 63 while on tour to the Blue Nile Province. He was accompaned by Dr. M. Rashad Farid the Under-Secretary Ministry of Health. The distinguished visitors were pleased to see the work done in the Section.

Dr. M.H. Satti, Director, Medical Research, Ministry of Health and Sir Graham Wilson, Director National Health Laboratories Britain visited the Section on 1st. March, 1964. A demonstration illustrating various insects of medical improtance along with pinned and mounted specimens was put up to the distinguished visitors. The working of the Station and the various experiments carried out were explained to Sir Graham and the reprints of papers published by the Section were presented to him.

For this demonstration new exhibits of all medical insects available in the country were prepared such as mosquitoes, *Phlebotomus*, *Simulium* Testse fly and *Tabanidae* in this preparation Abdel Karim eff. Abdalla extended great help to the Medical Entomologist by carrying out the latter instructions carefully, and some drawings were also made.

Training of Health Staff

Training was given to Sanitary overseers and house Inspectors. A batch of School boys from High School visited the Section that was given a brief talk on the importance and control of disease carrying insects.

SUMMARY REPORT

of

THE CHEMICAL LABORATORIES

FOR THE YEAR 1963/1964

ADMINISTRATIVE REPORT

1. Staff

(i) The staff position on 30th June, 1964 was as follows:—GOVERNMENT ANALYST

Abdel Hamid Ibrahim Suliman, D.G.M.C., B.Sc. (London), M.Sc. (London), D.I.C.

DEPUTY GOVERNMENT ANALYST

Rifaat Butrous Salama, B.Sc. (Alexandria), M.Sc. (London), D.I.C.

SENIOR SCIENTIFIC OFFICER

Mr. Milos Zivkovic, M.Sc., M. Pharm. (Belgrade)

SCIENTIFIC OFFICERS

Riad Mansour.

Mubarak Ali Karrar, B.Sc. (Khartoum), B.Sc. (Nottingham), M.Sc. (Cardiff)

ASSISTANT SCIENTIFIC OFFICERS

Joseph Zaki, B.Sc. (Khartoum), Diploma National College of Food Technology (London)

Zuheir Abdel Razak Atabani, B.Sc. (Khartoum) Abdel Wadood El Sayed Osman, B.Sc. (Alexandria). Ahmed Mahgoub El Hindi, B.Sc. (Khartoum) Bahieldin Ibrahim El Magboul, B.Sc. (Khartoum)

SENIOR TECHNICAL ASSISTANTS

Abu Bakr Ahmed Akour Ahmed Abdalla Nagi Mahdi El Tayeb Haboura

TECHNICAL ASSISTANTS

Hassan Ahmed Yassin
Mahmoud Abdel Ghafour
Ali Hag Ibrahim
Khidir Hassan Babiker
Mahmoud Mohammed Ibrahim
El Rashid El Tahir
Vacant

JUNIOR TECHNICAL ASSISTANTS

El Tahir Bedawi Fadul El Rayah Tewfig Salih Mohamed

CLERKS

Watt-Wyness Eliaba Ismail El Kamil El Sayed El Mekki Osman El Khidr Abu Shama

LIBRARIAN

Faisal Mirghani El Hakeem

- (ii) Mr. Milos Zivkovic, a Yugoslav expartriate, was selected to fill the post of Senior Pharmaceutical Chemist.
- (iii) Assistant Scientific Officer Joesph Zaki has been awarded the post-graduate Diploma in food quality control from the National College of Food Technology, U.K. He is spending at the moment his second year in Chelsea College of Science and Technology, U.K., studying for postgraduate Diploma in analytical chemistry. He is due to return in fJuly 1964.
- (iv) Senior Technical Assistant Abu Bakr Ahmed Akour has been awarded the Associate Membership of the Institute of Science Technologists, U.K. He is spending his second year training in the Government Chemist Laboratories, U.K., and other textiles and leather testing laboratories. He is due to return in July, 1964.
- (v) Assistant Scientific Officer Zuheir Abdel Razak Atabani has been selected to make use of an eight month World Health Organisation Fellowship course on Occupational Health (Scientific methods). The course is being held at Zagreb, Yugoslavia.
- (vi) The vacant post of assistant scientific officer and one of the vacant posts of technical assistants has been filled by new appointments.
- (vii) Clerk Pio Akolong Chol has been transferred and a new typist clerk Osman El Khidir Abu Shama filled his place.
- (viii) There was no change in unclassified staff.

2. General

- (i) By the end of 1964 it is expected that the staff position will greatly improve by the return of members of the staff studying or training abroad. Unfortunately we have not been able to send any of the other three assistant scientific officers for courses abroad and it is hoped that they will all proceed on their courses next year.
- (ii) Work on the foundations of the new buildings has been completed. The contract for the construction of the main building has not yet been awarded.
- (iii) Most of equipment provided this year was routine instruments and apparatus and replacements parts. This has enabled us to replace most old instruments, etc. and to equip every section with a complete range of routine apparatus and instruments e.g. automatic balances, furnances, ovens, colorimeters, extractors, distillation units, etc. This is expected to facilitate work greatly.
- (iv) About 85 books were acquired for the library. It is being planned that a new system for indexing be introduced with the help of the University of Khartoum.
- (v) The Ministry of the Interior has decided to assume all responsibilities for forensic work. These Laboratories will however, continue to maintain its forensic section till the Ministry of Interior establishes its own laboratories.

ANALYTICAL REPORT

1. Summary

The following table shows the number of samples received in different categories during the last two years.

| | | | | | | 1963/64 | 1962/63 |
|----------------------------|-------|-----|-----|-----|-----|---------|---------|
| Waters and Sewages | • • | | | | | 405 | 328 |
| Foods | | | | | | 481 | 611 |
| Drugs and Pharmaceutics | als | | | | | 41 | 67 |
| Clinical Specimens | • • | | | | | 298 | 277 |
| Toxicological Specimens | • • | | • • | | | 181 | 97 |
| Forensic Specimens | | | | | | 153 | 120 |
| Edible Oils, Seeds and Oil | Cakes | | • • | | | 3,349 | 3,568 |
| Damaged Materials | | | | | | 418 | 1,011 |
| Miscellaneous | • • | • • | • • | • • | | 445 | 309 |
| | | | To | TAL | - | 5 771 | 6,388 |
| | | | 10 | TAL | • • | 5,771 | 0,300 |

There is a slight decrease (less than 10 per cent) in the total number of samples submitted. The decrease is solely due to the decrease in the samples of damaged materials submitted and this is mainly due to the overall decrease in import-export business and the weather conditions durin the year.

The following table gives the number of samples submitted by the various Government Departments and others during the last two years.

| | | | | | 1963/64 | 1962/63 |
|------------------------------|--------|--------|-----|-----|---------|---------|
| 78.5° 1.10 | | | | - | 0.03 | |
| Ministry of Health | • • | · • | • • | | 861 | 1,114 |
| Ministry of Agriculture | • • | | | | 172 | 100 |
| Ministry of Animal Resources | | | | | 20 | 13 |
| Ministry of Commerce, Indust | ry and | Supply | • • | | 9 | 6 |
| Ministry of Communications | | | | | 41 | 25 |
| Ministry of Works | | | | | 3 | 40 |
| Customs Department | | | | | 150 | 75 |
| Armed Forces | | | | | 9 | 11 |
| Sudan Police | | | | | 180 | 80 |
| Local Authorities | | | | | 101 | 40 |
| Khartoum University | | | | | 17 | 6 |
| Sudan Gezira Board | | | | | 140 | 88 |
| Other Government Establishm | | • | | | 10 | 20 |
| Commercial Firms and Others | | | | • • | 4,058 | 4,770 |
| continue of the first diff. | • • | • • | • • | | 1,000 | 1,10 |
| | | T | TAL | | 5,771 | 6,388 |

The table shows an increase by Government and Semi-Government Departments and a decrease of samples submitted by commercial firms. Still over 70 per cent of the samples was submitted by commercial firms.

The following table shows fees charged for analytical work during the last two years.

| | | | 1963/64 | 1962/63 |
|-------------------------------|---------|-----|------------------------|--------------------------|
| Non-Government Establishments | | • • | LS. m;ms. 9,578.635 | LS. m/ms. 10.820. 849 |
| Government Departments | • • • • | • • | 3,291.350 | 1,590. 775 |
| | TOTAL | • • | 12,869.985 | 12,411.624 |

The analytical fees reflect the variations indicated above. The increase in the total fees is due to the increase in analytical charges that came into effect last year.

2. Water and Sewage

Samples of water and sewages were received from the following sources.

| | | | | | _ | 1963/64 | 1962/63 |
|--------------------|-----|-----|----------|------|-----|---------|---------|
| Ministry of Health | | | | | | 101 | 109 |
| Drilling Engineer | | | | | | 88 | 60 |
| Sudan Gezira Board | | | | • • | | 35 | 38 |
| Other Sources | • • | • • | • • | • • | • • | 181 | 121 |
| | | | Γ | OTAL | | 405 | 328 |

There is an increase in the samples received in this category.

3. Foods

The following samples were received during the year.

| | | | is quadrimonal est de la companyament este de la companyament este de la companyament este de la companyament | | | | 1963/64 | 1962/63 |
|------------------|-----|-----|---|-----|-------|-----|---------|---------|
| Official Samples | • • | • • | • • | • • | • • | • • | 361 | 486 |
| Other Samples | • • | • • | • • | • • | • • | | 120 | 125 |
| | | | | | TOTAL | • • | 481 | 611 |

There is a considerable decrease in samples in this category, mainly in samples submitted by public health authorities.

The following table gives a summary of the different varieties of foods examined in the last two years.

| | | | | | | | 1963/64 | 1962/63 |
|-------------------|----------|------|-----|-----|-----------------------|-----|-----------------|----------------|
| , | | | | | | | | |
| Alcoholic driks | • • | | | | | | 87 | 129 |
| Beans | | | | | | | 1 | 16 |
| Cereals and Cerea | ıl Produ | icts | | | | | 24 | 20 |
| Beetroots | | | | | | | | 48 |
| Cheese | | | | | | | 8 | 10 |
| Flour, Durra | | | | | | | 2 | 4 |
| Flour, Wheat | | | | | . , | | 151 | 93 |
| Fruits, Canned | | | | | | | 3 | 9 |
| Honey and Syrup |) | | | | | | 10 | 8 |
| Meat and Mat Pr | | | | | | | 6 | 8 |
| Milk, Raw | | | | | | | 66 | 71 |
| Milk, Dried | | | | | | | 21 | 5 |
| Rice | | | | | | | | 2 |
| Sardines | | | | | | | 1 | 5 |
| Squashes | | | | | | | $\hat{\bar{5}}$ | 15 |
| Sugar, Refined | | • • | | | | | 26 | $\frac{1}{26}$ |
| Tomato, Puree ar | | | • • | • • | # * | • • | 4 0 | 83 |
| Other Foods | | | • • | • • | • • | • • | 30 | 59 |
| Ound Foods | • • | • • | • • | • • | • • | • • | 00 | 00 |
| | | | | r | $\Gamma_{	ext{OTAL}}$ | | 481 | 611 |

No samples of beetroots were received during the year as research in beetroots in the Gezira has stopped. Wheat flour remains to be the main item of food usually examined.

4. Drugs and Pharmaceuticals

There is a decrease in this category with the decrease in the annual Ministry o Health purchases.

5. Clinical Specimens

There is still a further increase in this category. It is of interest to note that in the year 1954/55 the number of clinical specimens was only 17.

6. Toxicological and Forensic Specimens

There is over a 50 per cent increase in the number of specimens submitted in this category over last year.

7. Edible Oils, Seeds and Oil Cakes

The following samples were submitted for analysis during the last two years.

| | | | | | | | No. of Samples | | |
|---------------|------|-----|-----|-----|------|-----|----------------|---------|--|
| | | | | | | | 1963/64 | 1962/63 | |
| Cottonseed | • • | • • | • • | • • | | | 53 | 119 | |
| Groundnut Ker | nels | • • | • • | • • | • • | | 3,114 | 3,178 | |
| Sesameseeds | 0 0 | | | | • • | | 125 | 64 | |
| Castorseeds | • • | | • • | • • | | | 11 | 16 | |
| Edible Oils | • • | | • • | | | | 15 | 63 | |
| Oil Cakes | • • | • • | • • | • • | • • | • • | 31 | 128 | |
| | | | | Т | OTAL | | 3,349 | 3,568 | |

There is a slight decrease in samples in this category.

Damaged Materials

8.

The great decrease in samples in this category is repensible for the overall decrease in the total number of samples submitted during the year.

9. Misceallaneous Samples

The following table gives details of the various types of samples received in this category.

| | | | | | | 1963/64 | 1962/63 |
|--------|------|-----|------------|------------|------------|------------------|-----------------|
| | | | | | | 0 | 7 1 |
| • • | • • | • • | • • | • • | • • | 8 | 11 |
| • • | • • | | | • • | • • | | 9 |
| | | | | | | 14 | 15 |
| | | | | | | 2 | 1 |
| & Poli | shes | | | | | 1 | $\bar{3}$ |
| | | | | | | $21\overline{7}$ | 15 |
| | | | | | | | $\frac{10}{32}$ |
| | | | | | | | 83 |
| | | | | • • | • • | | |
| • • | • • | • • | | | • • | 93 | 140 |
| | | | ${ m T}$ | OTAL | | 445 | 309 |
| | • • | | & Polishes | & Polishes | & Polishes | & Polishes | 5 |

The increase is mainly due to the large number of samples of pesticides examined. Samples of DDT and Endrin Emulsifiable Concentrates were examined for emulsion properties for the Ministry of Agriculture and Sudan Gezira Board.

RESEARCH AND PUBLICATIONS

- (i) Plans are being made to start research in various problems during next year. This will become possible with the return of members of the staff from abroad. Already plans has been laid down for practical research on the effect of sodium nitrate in good and water on arrivals.
 - (ii) The 1962/63 Annual Report has been submitted but not yet published.

CHAPTER IX

SCHOOL OF HYGIENE

ANNUAL REPORT 1963/64

Staff

Principal
Asst. Principal
Public Health Officer
Asst. Clerk

Board of Studies

The Board of studies which consists of the A/Director (Public Health) as Chairman, Principal School of Hygiene as Secretary, Chief Public Health Inspector and Asst. Principal School of Hygiene as members has held four meetings during the year to discuss the different aspects of the School policy.

Board of Examiners

The Royal Society of Health examination which is held in Khartoum, is conducted by Dr. Ali Mohammed Nur, Prof. Mansour Ali Hasseeb, Sayed Abdel Rahman El Agib and Sayed Khalafalla Babiker with the Principal School of Hygiene in attendance.

Sanitary Overseers

On selection and when required the candidates receive a six months training in the School of Hygiene, which includes an adequate number of demonstrations to supplement lectures. 22 sanitary overseers from Halfa have conducted their training during the year for Halfa resettlement.

Public Health Officers

The basic education now required is that of the secondary standard.

The students take up 3 years course at the end of which they must pass the R.S.H. examination before being awarded the qualifying certificate.

14 students out of 17 have passed the R.S.H. in April 1964 and 3 were referred for a period of 3 months to be examined in September 1964.

20 students were taken this year 1963/64.

The Corriculum is Briefly as Follows

1st Year

General Science, Building Science, Drawing and Construction Levelling and Geometry. Given at Khartoum Technical Institute.

2nd Year

Entomology and Pests Control Helminthology, protozoology, Bacteriology, Water supply and disposal of Waste Matter.

3rd Year

Food and Food Control, Meat Inspection, Milk food production and Manufacture, Housing, Urban and Rural planning Communicable Diseases, School Health, Prison Health, Quarantines, Airports and Scaports, Central statistics, Sanitary Law, Relations between councils and Public Health Staff, Notes on training within industries, Health Education.

The necessary demonstrations that supplement the lectures include visits to Water Works, Food production Places, Schools, Prisons, and Factories, etc. Certain councils meetings are also attended. In addition to the demonstrations and practical training in Khartoum Province and its rural areas, each students spends part of his school vacation in another province beside Khartoum.

The School of Hygiene gave courses to Assistant Sanitary Overseers, Local Government Executive Officers, Health Visitors, Nurses and Medical Assistants, Nursing College, Nursing Intermediate training School.

3 Sanitary Overseers from Yeman have their training during the year.

Building of hostel progressig, and the school building approved, but not yet started.

CHAPTER X

THE GRAPHIC MUSEUM

The Graphic Museum has been closed since its demolition in 1962. The new building is nearing completion and is expected to open soon.

CHAPTER XI

The following Table shows the mean rainfall recorded during the year in provincial meteorological stations:—

| Province | No. of Stations | Mean Rainfall mms. | Highest Recorded Rainfall mms. | Lowest Recorded Rainfall mms. |
|---|---|---|--|--|
| Bahr El Ghazal Blue Nile Darfur Equatoria Kassala Khartoum Kordofan Northern Upper Nile | 10 22 13 23 19 7 16 10 12 | 897 425 483 1,267 246 93 515 17 829 | 1,345 1,041 783 2,281 805 129 963 78 1,604 | 404 100 241 624 6 51 126 0 460 |

THE PHARMACY AND POISONS ACT, 1963

(1963 Act No. 37)

AN ACT to repeal and re-enact the Pharmacy and Poisons Ordinance, 1939. In exercise of the powers conferred on him by Constitutional Order No. 1, the President of the Supreme Council for the Armed Forces hereby makes the following Act:—

PART I PRELIMINARY

Title

This Act may be cited as the Pharmacy and Poisons Act, 1963, abd shall come into force on the 1st. October, 1963.

Repeal

The Pharmacy and Poisons Ordinance, 1939, all enactments amending the same, and all rutes, orders and regulations made thereunder shall be repealed on the coming into force of this Act:

Provided that all licences, books, registers, lists and authorisations made or kept under any of the provisions of the said Ordinance and in force immediately prior to the repeal thereof shall be deemed to have been made or kept under this Act and shall continue to have effect accordingly until cancelled, replaced, or expired.

Defi

'W holesale dealing'

| initions | |
|---|--|
| 3. In this Act unl "authorised seller of drugs" | less the context otherwise requires:— in relation to any class of drugs means any person authorised by the Board under the provisions of Section 4 (3) to sell that class of drugs. |
| "Board" | means the Central Board of Public Health. |
| " dangerous drug " | means any of the poisons appearing in Part I of the Poisons List. |
| "dispense" | means to supply a drug on and in accordance with a prescription duly given by a licensed medical practitioner, dentist or veterinary surgeon. |
| " drug " | means any medicine or medicinal preparation or therapeutic substance and includes all poisons on the Poisons List. |
| "licensed" | in relation to a medical practitioner, dentist or veterinary surgeon means licensed to practise as such in the Sudan in accordance with the provisions of any law relating to such licensing for the time being in force. |
| " poison " | means any substance included in the Poisons List. |
| " poisons list " | means the list prepared in pursuance of section 23. |
| " non-poisonous drug " | means a drug which is not included in the Poisons List. |
| " poisonous drug " | means a drug included in Part II or Part III of the Poisons List. |
| "registered brand of drug" | means any brand, make or mark of drug registered in accordance with Section 22 |
| " registered pharmacist " | means a person whose name is in the Register kept in compliance with Section S. |

for the purpose of selling again.

means sale to an authorised seller of drugs who buys

PART II

REGISTRATION OF PHARMACISTS, LICENCING OF PHARMACISTS' BUSINESS AND AUTHORISATIONS TO DEAL IN DRUGS

Registration of pharmacists

- 4. (1) Except as may be specifically provided by any of the provisions of section 20 or 21 no person other than a person duly registered as a pharmacist under the provisions of this Part shall:
 - (a) carry on business or practise as a pharmacist;
 - (b) in the course of any trade or business prepare, mix, compound, dispense or supply wholesale or by retail any drug except under the immediate supervision of a registered pharmacist;
 - (c) describe himself as a pharmaceutical chemist, chemist, pharmacist or druggist or otherwise assume, take, exhibit or in any way make use of any title, emblem, description or addition reasonably calculated to suggest that he is a registered pharmacist.
- (2) Every person who acts in contravention of the provisions of this section shall be guilty of an offence and shall be liable on conviction to a fine not exceeding one hundred pounds or to imprisonment for a term not exceeding one year or to both such fine and imprisonment.
- (3) Notwithstanding sub-section (1) of this section the Board may, by order published in the Gazette, authorise any person, on such terms and conditions as it may think fit to sell drugs or any class or drugs either by wholesale or retail.

Application for registration as a pharmacist

5. Applications for registration as a pharmacist shall be made to the Board in the prescribed form.

Qualifications of pharmacists

6. No person shall be entitled to be registered as a pharmacist unless he possesses such qualifications in respect of pharmacy as from time to time may be prescribed by the Board.

Certificate of registration

7. A person whose application for registration as a pharmacist has been approved shall, upon the payment of a fee of LS. 5.000 m/ms. be entitled to the issue by the Board of a certificate of registration in the prescribed form which shall be valid until the 31st. December next after issue and shall then expire if not renewed as hereinafter provided.

Register of pharmacists

8. The Board shall keep a register in the prescribed form of all registered pharmacists.

Annual fee to be paid for retention of name on register

- 9. (1) Every registered pharmacist who wishes his name to be retained on the register shall before the 31st of December in each year make an application in that behalf to the Board and pay a renewal fee of LS. 1.000 m/ms.
- (2) A registered pharmacist who, having failed to renew his registration after its expiry, carries on business or practises as a pharmacist while such registration remains unrenewed shall be guilty of an offence and shall be liable on conviction to a fine not exceeding fifty pounds or to imprisonment for a term not exceeding six months or to both such fine and imprisonment.

Removal of names from the register

- 10. (1) The Board may remove from the register the name of any registered pharmacist:—
 - (a) who dies, ceases to carry on business as a pharmacist or does not renew his registration for any year; or
 - (b) who is convicted of any offence against this Act which in the opinion of the Board renders him unfit to continue to be registered as a pharmacist; or
 - (e) who is adjudged by the Board after due inquiry, at which such person shall have an opportunity of being heard, to have been guilty of infamous conduct in any professional or other respect, or of negligence in compounding, dispensing or selling drugs; or
 - (d) whose registration was in the opinion of the Board incorrect or was procured by fraud.
- (2) A person whose name has been removed from the register shall, if he carries on any business as a pharmacist be guilty of an offence and liable on conviction to a fine not exceeding one hundred pounds or to imprisonment for a term not exceeding one year or to both such fine and imprisonment.

Surrender of Certificate of registration

- 11. (1) Every registered pharmacist whose name is removed from the register shall surrender his certificate of registration to the Board for cancellation, and in the case of deceased pharmacist the certificate of registration shall be surrendered by his personal representative.
- (2) Any person who, without good cause, refuses or fails to surrender his certificate of registration in accordance with subsection (1) of this section shall be guilty of an offence and liable on conviction to a fine not exceeding ten pounds or to imprisonment for a term not exceeding one month or to both such fine and imprisonment.

Notice of all certificates of registration to be published in the Gazette

12. The Board shall cause to be published in the Gazette notifications of all certificates of registration issued under this Part and all removals from the register.

Licensing of pharmacists' premises

13. (1) Every person lawfully carrying on the business of pharmacist in accordance with the provisions of this Part shall cause each premises where such business is being carried on to be licensed for that particular business.

- (2) Application for licensing of premises under this section shall be made to the Board in the prescribed form.
- (3) The licence of any premises under this section shall become void upon the expiration of thirty days from the date of any change in the ownership of the business carried on therein.
- (4) The Board may, for good and sufficient reasons to be stated in writing, refuse to license or may cancel the licence of any premises which in their opinion is or has become unsuitable for the purpose of the business of a pharmacist.
- (5) The Board shall keep a register in the form prescribed of all premises licensed under the provisions of this section.

Business of pharmacist to be licensed

- 14. (1) (a) Every person lawfully carrying on the business of a pharmacist in accordance with the provisions of this Part shall cause such business to be licensed. Any person who contraveness this provision shall be guilty of an offence and liable on conviction to a fine not exceeding one hundred pounds or to imprisonment for a term not exceeding one year or to both such fine and imprisonment, and on conviction for a second or subsequent offence to a fine not exceeding five hundred pounds or to imprisonment for a term not exceeding five years or to both such fine and imprisonment.
 - (b) Licences for the business of a pharmacist shall be of four kinds:—
 - (i) an "A" licence permitting the holder to purchase or sell, by wholesale only, under the personal control of a registered pharmacist or licensed medical practioner, registered drugs in licensed premises;
 - (ii) a "B" licence permitting the holder to sell by retail only registered drugs under the personal control of a registered pharmacist in licensed premises;
 - (iii) a ,, C "licence permitting the holder to purchase or sell by wholesale or retail, under the personal control of a registered pharmacist or an authorised seller of Part 3 poisons, Part 3 poisons only, in licensed premises;
 - (iv) a "D" licence permitting the holder to manufacture for sale under the personal control of a registered pharmacist registered drugs in licensed premises;
- (2) Application for a licence of a business under this section shall be made to the Board in the prescribed form.
- (3) The licence of any business under this section shall become void forthwith—
 - (a) upon the expiration of thirty days from the date of any change in the ownership of the business;
 - (b) if the person carrying on the business absents himself from the town where the business is carried on for a continuous period of 12 months;

- (c) if the business is transferred to any other premises ucnlicensed for that particular business;
- (d) if the business remains open for any length of time in the absence of a registered pharmacist or a licensed medical practitioner or an authorised seller of Part 3 poisons as the case may be according to the provisions of this section;
- (e) if the registered pharmacist, licensed medical practitioner or authorised seller of Part 3 poisons accepts any employment or undertakes any professional practice other than the business which this section requires to be under his personal control.

Issue of licences

15. Every person carrying on the business of a pharmacist which is required to be licensed in accordance with the provisions of section 14 shall, upon payment of a fee of LS. 10.000 m/ms. is issued by the Board with a licence in the prescribed form which shall be valid until the 31st December next after issue and shall then expire if not renewed as hereinafter provided.

Register of licences to be kept

16. The Board shall keep a register in the prescribed form of licences issued under section 15 of this Act.

Retention of licensed business

17. Every person carrying on the business of a pharmacist which is licensed under section 15 who wishes his business to be retained on the registered shall, before the 31st on December in each year, make an application in that behalf to the Board and pay a renewal fee of LS. 2.000 m/ms.

Board may refuse issue of a licence.

- 18. (1) The Board may, for sufficient reason relating to the business, the owner thereof or the premises, refuse to issue a licence under section 15 or revoke a licence so issued.
- (2) Any person aggrieved by a decision made by the Board under subsection (1) of this section shall have the right to apply to the High Court for review of such decision, and the Court's decision on the matter shall be final.

Use of descriptions

19. The owner of a licensed pharmacist's business may use in connection with his business the description of chemist, pharmacist, druggist or dispensing chemist or dispensing druggist and may use the description tt drug Store" in connection with a business carrying an "A" licence or the description "Pharmacy" in connection with a business carrying a "B" licence.

Representatives of deceased or insolvent owners of licensed pharmacist's business

20. Notwithstanding anything contained in the foregoing provisions of this Part:—

- (a) if the owner of a licensed pharmacist's business dies, or becomes or unsound mind or is adjudged bankrupt or enters into an arrangement with his creditors his representatives may, with the permission of the Board and subject to such directions and conditions as the Board may in its discretion think fit to impose, carry on the business, and it shall not be necessary for any such representative to be registered as a pharmacist so long as the business continues under the personal control of a registered pharmacist, licensed medical pracitioner or authorised seller of Part 3 poisons as the case may be, and for such period not exceeding five years as the Board may decide;
- (b) the representatives of the owner of a licensed pharmacist's business carrying on business in accordance with the provisions of paragraph (a) of this section may use any title, emblem or description which might have been lawfully used by the owner whose representatives they are.

Supply drugs by licensed medical, dental and veterinary practitioners

- The foregoing provisions of this Part shall not apply to the supplying of drugs by the following:—
 - (a) a licensed medical practitioner or a licensed dentist or a licensed veterinary surgeon in the ordinary course of his practice;
 - (b) any Government servant in the course of his duties as such servant;
 - (c) any Government institution; or
 - (d) any hospital or similar institution exempted by an order, whether general or special, of the Board.

PART III

DRUGS

Registration of drugs.

- 22. (1) It shall be unlawful to manufacture, import, distribute, sell, offer for sale, receive for resale, purchase, administer, transport or possess any brand of drugs which has not been registered with the Board.
- (2) A person wishing to register any brand of drug shall file with the Board an application in the prescribed form, filling in all particulars required and enclosing:—
 - (i) fully packed samples of that brand of drug;

(ii) a copy of all claims made by the manufacturer for that brand of drug;

(iii) a full description of the clinical and other tests upon which the claims are based; or arom sucsion

(iv) a registration fee of LS. 1.000 m/ms;

(v) any other relevant information that the Board may in any case require.

(3) The Board may register any brand of drug and issue a certificate of registration in the prescribed form subject to any restrictions the Board may see fit to impose. Honrel

- (4) The Board may, for reasons to be stated in writing refuse to register or refuse to renew the registration of any brand of drugs or cancel the registration of any registered brand of drug, which is, in their opinion, unsuitable for registration at the time.
- (5) The Board shall keep a register in the form prescribed of all brands of drugs registered under the provisions of this section.
- (6) A certificate of registration granted under this section snail expire after 24 months, but may be renewed, on application for renewal being made in the prescribed form, and accompanied by a renewal fee of P.T. 50, not later than 30 days before the expiry date shown on the certificate.
- (7) Every person who contravenes the provisions of sub-section (1) of this section shall be guilty of an offence and shall be liable on conviction to a fine not exceeding one hundred pounds or to imprisonment for a term not exceeding one year or to both such fine and imprisonment.

PART IV POISONS

The Pouns List

- 23. (1) The Board shall as soon as may be after the coming into force of this Act prepare and publish in the Gazette a list of the substances which are to be treated as poisons for the purpose of this Act. The list may be amended from time to time as the Board may think fit.
- (2) The list to be prepared under this section shall be divided into three parts as follows:—

Part 1

which shall consist of those poisons which are in the opinion of the Board to be regarded as dangerous drugs.

Part 2

which shall consist of those poisons which are in the opinion of the Board not dangerous drugs but which subject to the provisions of this Act may not be sold except by a registered pharmacist or an authorized seller of Part 2 poisons.

Part 3

which shall consist of those poisons which subject to the provisions of this Act may not be sold except by a registered pharmacist or an authorizsed seller of Part 3 poisons.

- (3) In determining the distribution of poisons as between Part 2 and Part 3 of the list, regard shall be had to the desirability of restricting Part 3 to articles which are in common use for purposes other than the treatment of human ailments.
- (4) The list made under sub-section (1) of this section as in force for the time being is in this Act referred to as the Poisons List, and Part 1, Part 2 and Part 3 poisons mean poisons included in Parts, 1, 2 and 3 respectively of the Poisons List.

Provisions relating to dangerous drugs, importation and exportation of dangerous drugs.

24. No person shall import into or export from the Sudan any dangerous drug or any plant or part thereof from which such drug can be extracted or manufactured except under a special licence in the prescribed form to be isued by the Board.

Manuafeture of dangerous drugs

25. No person shall manufacture or carry on any process in the manufacture of any dangerous drug or cultivate any plant from which such drug can be extracted or manufactured except under a special licence in the prescribed form to be issued by the Board with the approval of the Minister of Health. Such licence shall specify the premises and conditions under which the manufacture or process may be carried on or the place in which and the extent to which such plant may be cultivated.

Sale and distribution of dangerous drugs

26. Except when a dangerous drug is lawfully dispensed by a registered pharmacist or an authorised seller of Part 1 poisons on licensed premises and in pursuance of a prescription given by a licensed medical practitioner or a licensed veterinary surgeon or is supplied by a licensed medical practitioner or a licensed veterinary surgeon who dispenses his own medicine in accordance with the conditions hereinafter specified no person shall supply or proceure or offer to supply or procure any dangerous drug to or for any person who is not licensed or otherwise authorised to be in possession of such drug, nor or to any person so licensed or authorised except in accordance with the terms and conditions of such licence of authority:

Provided that the administration of a dangerous drug by or under the personal supervision of a licensed medical practitioner or of a licensed dentist in the course of medical or dental treatment or of a licensed veterinary surgeon in the treatment of an animal shall not be deemed to be supplying the drug within the meaning of this section.

Provisions as to prescribing dangerous drugs

- 27. A prescription for the supply of a dangerous drug shall comply with the following provisions:—
 - (a) A dangerous drug shall not be prescribed except on a separate prescription.
 - (b) the prescription shall be legibly written in ink and dated, and signed with his full name and address by the medical practitioner, dentist or veterinary surgeon giving it and shall specify the name and address of the person for whose use the preparation is given and the total amount of the drug to be supplied on the prescription.
 - (c) a prescription shall not be given by a licensed dentist except for the purpose of dental treatment and shall be marked "for local dental treatment only."
 - (d) a prescription shall not be given by a licensed veterinary surgeon except for the purpose of treatment of animals and shall be marked "for animal treatment only.
 - (e) a prescription shall not be given for the use of the prescriber himself.

Provision as to dispensing dangerous drugs

- 28. The following provisions shall be observed by persons dispensing precriptions for dangerous drugs:—
 - (a) a dangerous drug shall not be supplied or dispensed except on a separate prescription.

(b) a dangerous drug shall not be supplied more than one on the same prescription unless the prescription so directs in which case the drug may be supplied on more than one but not exceeding three occasions at such intervals as may be specified in the prescription:

Provided that if the dangerous drug prescribed is pethidine or morphine no supply shall be repeated without a fresh prescription, and the maximum quantity to be supplied in consequence of one prescription shall not exceed, in the case of pethidine, 3 ampoules of 100 milligrams each or 6 ampoules of 50 miligrams each or 12 tablets of 25 milligrams each, and in the case of morphine 3 ampoules of $\frac{1}{3}$ grains each or 4 ampoules of $\frac{1}{4}$ grains each or 6 ampoules of $\frac{1}{6}$ grains each and the supply of the aforementioned two drugs shall not be repeated within any single period of seven days without the approval in writing of the Province Medical Officer of Health.

- (c) the prescription shall be marked with the date on which it is dispensed and shall be retained and be available for inspection for two years on the premises where it is dispensed and in the event of the premises ceasing before the expiration of two years to be premises where such a drug may lawfully be dispensed the prescription shall be forwarded to the Board.
- (d) no prescription signed by a licensed medical practitioner outside the Sudan shall be dispensed unless counter-signed by a licensed medical practitioner.

Possession of dangerous drugs

- 29. No person shall be in possession of or attempt to obtain possession of any dangerous drug unless:—
 - (a) he is licensed under section 24 to import or export the drug; or
 - (b) he is licensed under section 25 to manufacture or under section 26 to supply the drug; or
 - (c) he is otherwise authorised by this Act to be in possession of the drug;
 - (d) the drug was lawfully supplied for his use by a licensed medical practitioner, licensed dentist or licensed veterinary surgeon or on the prescription of such a medical practitioner, dentist or veterinary surgeon and in accordance with the prescription.

Record of receipts and sales

- (30) Every person who supplies and dangerous daug shall comply with the following provisions:
 - (a) he shall enter or cause to be entered in a register kept for that sole purpose all supplies of the drug purchased or otherwise obtained by him, and all dealings in the drug effected by him (including sales or supplies to persons outside the Sudan) in the form and containing the particulars from time to time prescribed.
 - (b) separate registers or separate parts of the register shall be used for:—
 - (i) cocaine, ecgonine and substances containing either of them;
 - (ii) morphine and subtances containing it;
 - (iii) medicinal opium and substances containing it;

- (iv) hashish and substances containing it;
- (v) pethidine and its derivatives and substances containing any one or more of them.
- (c) he shall make every entry relating to any of the drugs purchased or otherwise obtained by him on the day on which the drug is received and with respect to any sale or supply on the day on which the sale or supply is effected.
- (d) he shall keep the register on the premises on which his business is carried on so that it shall at all times be available for inspection.
- (c) he shall not cancel, obliterate or alter any entry in the register or make any entry which is untrue in any particular. Any mistake shall be corrected by a marginal note or footnote.
- (f) registers shall be kept for at least two years after completion.

Provisions relating to part 2 poisons, sale of part 2 poisons

- 31. (1) Subject to the provisions of this Part no person other than a registered pharmacist shall sell any Part 2 poisons unless:—
 - (a) he is an authorised seller of Part 2 poisons; and
 - (b) the sale is effected on licensed premises; and
 - (c) the person to whom such poison is supplied:—
 - (i) is certified in writing in the manner prescribed and by a person authorised by sub-section (3) of this section to give a certificate for the purpose as being a fit person to be in possession of the particular poison; and
 - (ii) is personally known to the authorised seller as a person to whom the poison may properly be sold.
 - (2) The seller of such poison shall not deliver it until:—
 - (a) he has made or caused to be made an entry in a book kept for the purpose to be called a Part 2 Poisons Book stating in the form prescribed the date of the sale, the name and address of the purchaser and of the prescriber or of the person if any by whom the certificate required under sub-paragraph (c) (i) of sub-section (1) of this section was given, the name and quantity of the poison sold, and the purpose for which it is stated by the parchaser to be required; and
 - (b) the purchaser has affixed his signature to the aforesaid entry.
- (3) The Board may authorise fit and proper persons to give certificates for the purposes of paragraph (c) (i) of sub-section (1) of this section, and shall from time to time publish in the Gazette a list of persons so authorised.

Provisions relating to part 3 poisons, Sale of part 3 poisons

32. (1) Subject to the provisions of this Part no person shall sell a Part 3 Poison unless:—

- (a) he is an authorised seller of Part 2 or Part 3 poisons;
- (b) the sale is effected on licensed premises; and
- (c) the person to whom such poison is supplied is certified in writing in the manner prescribed by a person authorised under subsection (3) of section 31 to give a certificate for the purpose.
- (2) The seller of such poison shall not deliver it until:
 - (a) he has made or caused to be made an entry in a book kept for the purpose to be called a Part 3 Poisons Book stating in the form prescribed the date of the sale, the name and address of the purchaser and of the person by whom the certificate required under sub-paragraph (b) of sub-section (1) of this section was given, the name and quantity of the poison sold, and the purpose for which it is stated by the purchaser to be required; and
 - (b) the purchaser has affixed his signature to the aforesaid entry.

Provisions in case of certain transactions

- 33. (1) Except as hereinafter specifically provided, nothing in the foregoing provisions of this Act relating to the supply of Part 2 and Part 3 Poisons shall extend to or be deemed to prohibit the sale of poisons by an authorised seller of those poisons to:—
 - (a) a licensed medical practitioner or dentist or a veterinary surgeon for the purpose of his profession;
 - (b) any employee of the Government in the course of his duties a such employee;
 - (c) a Government institution;
 - (d) any hospital, dispensary or similar institution or any person or institution concerned with scientific education or research if the aforesaid hospital, dispensary, person or institution is approved by an order, whether general or special, of the Board.
 - (e) a registered pharmacist by way of wholesale dealing.
 - (2) In any of the cases specified in sub-section (1):—
 - (a) the seller shall obtain before the completion of the sale an orde in writing signed by the purchaser stating his name and addrese trade or profession, the name and quality of the poison to be purchased and the purpose for which it is required;
 - (b) the seller shall be reasonably satisfied that the signature is that of the person purporting to have signed the order and that that person carries on the trade, business or profession stated in the order, being one in which the poison to be purchased is used;
 - (c) if the poison sold is sent by post, it shall be sent by registered post;
- (d) the provisions of sections 31 (2) and 32 (2) shall be complied with **Provisions relating to poisons generally, Labelling of poisons**

34. No person shall supply any poison unless the container of the poison is labelled in the case of a poison supplied on a prescription with the number of the prescription, the name of the person for whom prescribed and the name of the supplier and in the case of a poison not supplied on a prescription with the name of the poison and in the case of a preparation which contains a poison as one of the ingredients thereof, with the prescribed particulars as to the proportion which the poison contained in the preparation bears to the total ingredients, and in every case with the word 'Poison' in Arabic and English and any other prescribed indication of the character of the article and if supplied on sale with the name of the supplier.

Storage of poisons

- 35. (1) Every person having in his possession any dangerous drug shall keep it in a locked cupboard apart from other drugs and labelled as a dangerous drug both in Arabic and in English.
- (2) Every person having in his possession for the purpose of sale any Part 2 or Part 3 poison, shall keep the same:—
 - (a) in a cupboard or drawer reserved solely for the storage of poisons:
 - (b) in a part of his premises which is partitioned off or otherwise separated from the remainder of the premises and to which customers are not permitted to have access; or
 - (c) on a shelf reserved solely for the storage of poisons, but so that no food is kept directly under or above the shelf and the container of the poison is rendered distinguishable by touch from the containers of articles other than poisons stored upon the same premises.
- (3) All poisons shall be stored in securely stappered containers of material mpervious to poisons.

Medicines supplied by medical practitioners and others

- 36. (1) Nothing in section 31, 32 or 34 shall apply:—
 - (a) to medicine supplied by a licensed medical practitioner, licensed dentist or licensed veterinary surgeon for the purpose of medical, dental or veterinary treatment as the case may be; or
 - (b) to a medicine supplied or dispensed by any institution exempted from the provisions of Part II of this Act under the provisions of paragraph (d) of section 21, or
 - (c) to medicine dispensed by an authorised seller of poisons on licensed pharmacist's premises if the following provisions are complied with:—
 - (i) the medicine shall be distinctly labelled with the name and address of the person by whom it is dispensed;
 - (ii) the following particulars shall within twenty four hours of the dispensing of the medicine be entered in a book kept for the purpose and to be known as the 'Prescription Book';

- (a) the date on which the medicine was dispensed;
- (b) the ingredients of the medicine and the quantity dispensed;
- (c) the name and address of the person giving the prescription.
- (d) the name and address of the person to whom the medicine was dispensed.

Sale of poisons by automatic machines

37. No person shall expose or cause to be exposed for sale any poison in or by means of an automatic machine.

Penalties

38. Every person who contravenes any of the provisions of Part IV for which no other penalty is prescribed shall be guilty of an offence and liable, on conviction, if the offence related to a dangerous drug to a fine of five hundred pounds or to imprisonment for five years, if the offence relates to a Part 2 poison, to a fine of two hundred pounds or to imprisonment for two years and if the offence relates to a Part 3 poison, to a fine not exceeding one hundred pounds or imprisonment for a term not exceeding one year or in every case to both such fine and such imprisonment, and on conviction for a second or subsequent offence to a penalty not exceeding five times the penalty which might be imposed for a first offence of a similar nature.

PART V.

Miscellaneous provisions powers of search and inspection of books

- 39. (1) Any medical or administrative officer or other person duly authorised in writing in that behalf by the Province Medical Officer of Health, in this Part referred to as an authorised officer, may for the purpose of securing compliance with this Act at all reasonable times enter any premises in which a registered pharmacist or an authorised seller of drugs carries on business and any premises in which drugs are stored, packed, prepared, processed or manufactured and in which he has good cause to suspect that a breach of the law in relation to drugs has been committed and may make such examination and inquiry and do such other things, including the taking of samples on payment, as may be necessary for as certaining whether the provisions aforesaid are being complied with.
- (2) Every registered pharmacist and every authorised seller of drugs or owner of a licenced pharmacist's business shall on the demand of an authorised officer produce for inspection his certificate, his authorisation or his licence as the case may be.
- (3) Every registered pharmacist and every authorised seller of drugs and every owner of a business in which drugs are stored, packed, prepared, processed or manufactured shall at all reasonable times cause all books kept by him to be open to and available for inspection by an authorised officer.
- (4) Any person who contravenes any of the foregoing provisions of this section shall be guilty of an offence and liable on conviction to a fine anot exceeding twenty pounds.

Production of authorization

40. An authorized officer exercising his powers under section 39 shall produce his authorization on demand.

Drugs to conform to certain standards

- 41. (1) The Board may from time to time prescribe standards of nature, substance, quantity or quality to which any drug must conform and no person shall sell or supply any drug which does not conform to the standards so prescribed or which is unwholesome or adulterated or does not conform to the description under which it is supplied.
- (2) Any person who contravenes the provisions of sub-section (1) of this section shall be guilty of an offence and shall be liable to a fine not exceeding one hundred pounds or to imprisonment for a term not exceeding one year or to both such fine and imprisonment.

Patent medicines

- 42. The Board may by order prohibit or control the manufacture, sale, advertisement or possession of any secret, patent, proprietary or homocopathic medicine or preparation.
- (2) Any person who contravenes or fails to comply with any order made under sub-section (1) shall be guilty of an offence and liable on conviction to a fine not exceeding one hundred pounds or to imprisonment for a term not exceeding one year or to both fine and imprisonment.

Power to make regulations

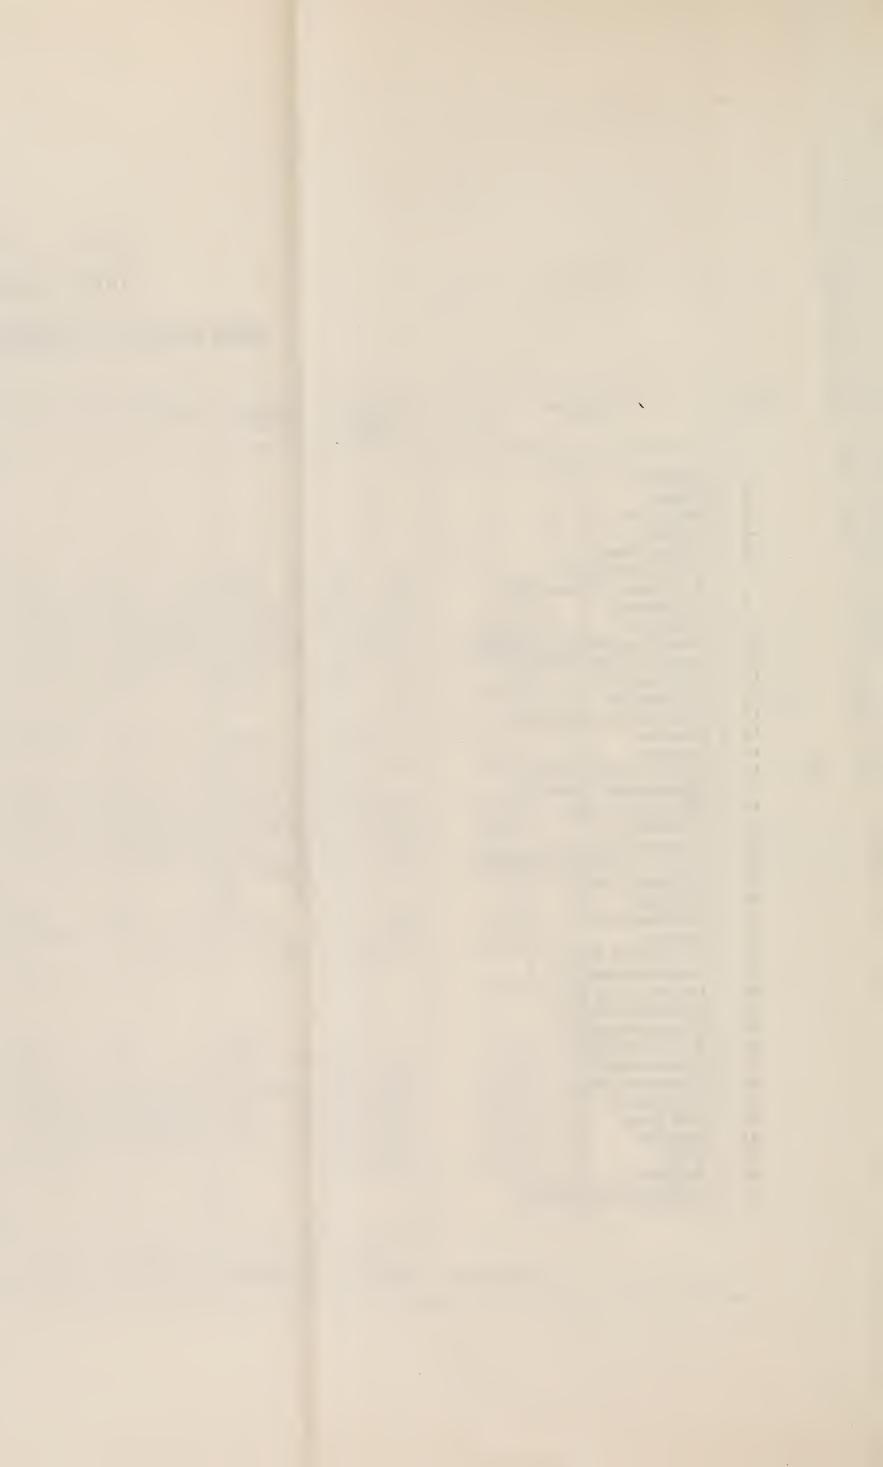

- 43. (1) The Board may make regulations not inconsistent with the provisions of this Act for the purpose of giving further effect thereto and in particular for any of the following purposes:
 - (a) regulating the sale and prohibiting or restricting the advertisement of drugs;
 - (b) prohibiting the sale by retail of any specified drug except on a prescription duly given by a licensed medical practitioner or licensed dentist or a licensed veterinary surgeon and for prescribing the form and regulating the use of such prescription;
 - (c) exempting from any of the provisions of this Act relating to the sale of drugs any article or substance containing a drug or any class of such articles or substances;
 - (d) prohibiting, regulating or restricting the manufacture of drugs, pharmaceutical preparations and therapeutic substances;
 - (e) requiring registered pharmacists, owners of licensed pharmacist's businesses, authorised sellers of drugs and manufacturers and their representatives and agents, to supply the Board with all or any of the following particulars with regard to any drug pharmaceutical preparation or therapeutic substance proposed to be manufactured, imported, exported, transported, possessed, sold or labelled by them, namely:—

- (i) particulars of its composition, chemical formula and properties;
- (ii) particulars of the manner in which it is used or proposed to be used in medicine or public health, and its effect in that respect;
- (iii) particulars of any information with regard to investigations or tests carried out to as certain its effect when used in medicine or public health.
- (f) the safe custody and storage of drugs;
- (g) the import, export, transport, possession, sale and labelling of drugs, pharmaceutical preparations and therapeutic substances;
- (h) the size, shape and dimensions of containers in which poisons may be supplied and the materials of which they may or may not be made;
- (i) the addition to drugs of specified ingredients for the purpose of rendering them readily distinguishable as poisons;
- (j) the compounding and dispensing of drugs;
- (k) prescribing the period for which any books or registers required to be kept for the purpose of this Act are to be preserved;
- (l) the recognition of any certificate or diploma of competency as a pharmacist issued by any university, college, society, council or board for the purpose of section 6 of this Act;
- (m) prescribing the form, and contents of applications, licences and authorisations and the fees payable therefor;
- (n) prescribing anything which is by this Act to be prescribed;
- (2) A copy of all such regulations shall be laid before the Council of Ministers.
